## **Chemical Calculations At A Glance:**

**Chemical Calculations at a Glance** Paul Yates, 2009-02-05 It is now possible to enter a chemistry degree course at many UK universities without any formal maths training beyond age 16. Addressing this deficiency requires students to take additional mathematics training when entering university yet the relevance of maths to chemistry is often poorly appreciated by chemistry students. In addition many service courses are either too abstract or aimed at physicists and engineers for students of chemistry who are not inclined to study mathematical techniques per se and do not make the connection between the maths they are taught and the chemistry they want to study. Based on the successful at a Glance approach with integrated double page presentations explaining the mathematics required by undergraduate students of chemistry set in context by detailed chemical examples this book will be indispensable to all students of chemistry. By bringing the material together in this way the student is shown how to apply the maths and how it relates to familiar concepts in chemistry. By including problems with answers on each presentation the student is encouraged to practice both the mathematical manipulations and the application to problems in chemistry. More detailed chemical problems at the end of each topic illustrate the range of chemistry to which the maths is relevant and help the student acquire sufficient confidence to apply it when necessary.

This book is unique in that it provides a gentle introduction with a chemistry centered rather than math centered approach. Written by a chemist for undergraduate students it imparts an understanding of the subject from a chemist's viewpoint using examples from real chemistry. It includes illustrations that show exactly how to use calculators to work problems and examples of important chemical problems with fully worked solutions. This book is an ideal companion throughout a chemistry course that can be consulted when required and used to keep one step ahead of the lecture.      *American Book Publishing Record*, 2003
