Chemical Chaos:

Chemical Chaos Nick Arnold, 2014-01-02 Forget fiendish formulas and take a look at bubbling mixtures poisonous potions bangs and blasts Discover what substances lurk in your dinner the sickening stench of the world's worst stink bomb and which awful acids will eat you alive Redesigned in a bold funky new look for the next generation of HORRIBLE SCIENCE fans

Chemical Chaos Stephen K. Scott, 1993 This valuable account of chemical chaos now available in paperback reviews both theory and experiment emphasizing the simple features that combine to produce order within disorder The author begins by revealing the links between chemical kinetics and the interdisciplinary subject of dynamical systems Various bifurcation sequences are then introduced through representative model schemes with the emphasis on generality and simplicity Chaos arises in both conventional chemical reactions and forced or couples systems and both are considered here Various experimental and diagnostic techniques to test for chaos are then described and the remaining chapters review experimental studies in a wide range of chemical and biochemical systems

Chemical Chaos Stephen K. Scott, 2023 This account of chemical chaos reviews both theory and experiment emphasizing the simple features that combine to produce order within disorder

Chemical Chaos Nick Arnold, 2012 This book explores the world of chemistry focusing on the funny fascinating and horrible aspects Examples include why glass eyes aren't really made of glass what would make the worst stink bomb ever and how to make your own toothpaste Suggested level intermediate junior secondary

Non-Equilibrium Dynamics in Chemical Systems C. Vidal, A. Pacault, 2012-12-06 Markedly apart from elementary particle physics another current has been building up and continuously growing within contemporary physics for several decades and even expanding into many other disciplines especially chemistry biology and quite recently economics Several reasons account for this presumably the most important one lies in the fact that whatever the specific problem model or material concerned the same basic mathematical features are always involved In this way a general phenomenology has emerged which unlike thermodynamics is no longer dependent upon the details or specifics what largely prevails is the nonlinear character of the underlying dynamics Perhaps we are witnessing the emergence of a nonlinear physics In a way similar to the birth of quantum physics in the twenties a physics which deals with the general behaviour of systems whatever they are or may be Over the past fifteen years chemical systems evolving sufficiently far from equilibrium have proved to be particularly well fitted to experimental research on nonlinear behaviour oscillation multistability birhythmicity chaotic evolution spatial self organization and hysteresis are displayed by chemical reactions whose number is growing each year In this volume are collected the lectures communications and posters abstracts presented at an international meeting entitled Non Equilibrium Dynamics in Chemical Systems held in Bordeaux France September 3rd 1984

1984 Encyclopedia of Chemical Physics and Physical Chemistry John H. Moore, Nicholas D. Spencer, 2023-07-03 The Encyclopedia of Physical Chemistry and Chemical Physics introduces possibly unfamiliar areas explains important experimental and computational techniques and describes modern endeavors The encyclopedia quickly provides the basics defines the scope of each subdiscipline and indicates where to go for a more complete and detailed explanation Particular attention has been paid to symbols and abbreviations to make this a user friendly encyclopedia Care has been taken to ensure that the reading level is suitable for the trained chemist or physicist The encyclopedia is divided in three major sections FUNDAMENTALS the mechanics of atoms and molecules and their interactions the macroscopic and statistical description of systems at equilibrium and the basic ways of treating reacting systems The contributions in this section assume a somewhat less sophisticated audience than the two subsequent sections At least a portion of each article inevitably covers material that might also be found in a modern undergraduate physical chemistry text METHODS the instrumentation and fundamental theory employed in the major spectroscopic techniques the experimental means for characterizing materials the instrumentation and basic theory employed in the study of chemical kinetics and the computational techniques used to predict the static and dynamic properties of materials APPLICATIONS specific topics of current interest and intensive research For the practicing physicist or chemist this encyclopedia is the place to start when confronted with a new problem or when the techniques of an unfamiliar area might be exploited For a graduate student in chemistry or physics the encyclopedia gives a synopsis of the basics and an overview of the range of activities in which physical principles are applied to chemical problems It will lead any of these groups to the salient points of a new field as rapidly as possible and gives pointers as to where to read about the topic in more detail

Complex Chemical Reaction Systems Jürgen Warnatz, Willi Jäger, 1987-11-23 Chemical reaction systems of practical interest are usually very complex They consist of a large number of elementary reactions hundreds or thou sands in a small system mostly with rate coefficients differing by many orders of magnitude which leads to serious stiffness and they are often coupled with surface reaction steps and convective or diffusive processes Thus the derivation of a true chemical mechanism

can be extremely cumbersome In most cases this is done by setting up reaction models which are improved step by step using for example perturbation theory numerical simulation and sensitivity analysis and hopefully in the near future parameter identification procedures and by comparison with experimental data on sensitive properties Because of the complexity of these processes it was very difficult in the past to convince engineers to apply methods using detailed mechanisms given in terms of elementary reactions and even in basic sciences there was scepticism about this ambitious aim A previous workshop on modelling of chemical reaction systems held in 1980 was an attempt to find a common language of mathematicians chemists and engineers working in this interdisciplinary area Since then considerable progress has been made by the simultaneous development of applied mathematics an enormous increase of computer capacity and the development of experimental techniques in physical chemistry that have made available well working reaction mechanisms in some fields of reaction kinetics
