Chemistry In Space:

Chemistry in Space J. Mayo Greenberg, Valerio Pirronello, 2012-12-06 This volume contains the lectures presented at the first course of the Inter national School of Space Chemistry held in Erice Sicily from May 10 to May 20 at the E Majorana Centre for Scientific Culture The course was attended by 57 participants from 11 countries The recognition by Professor A Zichichi that space chemistry is one of the important and rapidly growing scientific disciplines with many and varied applications provided the stimulation to initiate this new school Historically the study of chemistry in space had its major origins in comets the solar nebula and circumstellar envelopes before the interstellar medium achieved its current prominence A remarkably rapid development in interstellar chemistry was precipitated by the discovery of formaldehyde in the late 1960 s made possible by the new radio observational techniques A four atom molecule in interstellar space was indeed a surprise considering that only a short time ear lier there were still arguments about the existence of the simplest of all molecules the hydrogen molecule The application of ion molecule reactions to interstellar cloud chemistry provided a rich variety of new possibilities which were however continuously under pressure to keep pace with radio astronomical discoveries of more and more complex molecules

Analytical Chemistry in Space Richard E. Wainerdi, 2013-10-22 Analytical Chemistry in Space presents an analysis of the chemical constitution of space particularly the particles in the solar wind of the planetary atmospheres and the surfaces of the moon and planets Topics range from space engineering considerations to solar system atmospheres and recovered extraterrestrial materials Mass spectroscopy in space exploration is also discussed along with lunar and planetary surface analysis using neutron inelastic scattering This book is comprised of seven chapters and opens with a discussion on the possibilities for exploration of the solar system by mass spectroscopy with particular reference to analysis of compositional data on solar system objects such as the Earth and meteorites asteroids comets and interplanetary dust The reader is then introduced to the project administration instrument design and spacecraft integration problems that must be solved to successfully fly a space experiment The following chapters focus on the atmospheres of the sun and planets the use of mass spectroscopy in solar system exploration and of neutron inelastic scattering in lunar and planetary surface analysis and extraterrestrial in situ 14 MeV neutron activation analysis The final chapter is devoted to the advantages and applications of thermal neutron activation to the analysis of certain samples of geological interest This monograph will be a useful resource for analytical chemists and space scientists

Astrochemistry David A Williams, Cesare Cecchi-Pestellini, 2023-02-08 Ever wondered if the chemical processes taking place in space could be related to the origins of life The authors of this book both experienced astrochemists embark on a discussion to find the answers to this question and more and include a general introduction to astrochemistry for chemistry students They explore chemistry occurring in the universe from its very early beginnings until the present era Based on our current understanding astrochemistry is known to occur in interstellar gas on dust grains and in interstellar ices in stellar atmospheres and envelopes in dense star and planet

forming regions and on planets and other bodies in planetary systems Recent observational discoveries supported by remarkable laboratory work emphasize chemical complexity leading to answers to the tantalizing question can this complexity be related to the origin of life This book provides the tools to enable chemistry students to make their own computational investigations of astrochemistry and directs study across the chemical sciences and astronomy Concentrating on fundamental processes this book is a useful teaching aid *Chemistry of Space* David E.
