Chemistry James E. Brady, Neil D. Jespersen, Frederick Senese, 2009 The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon as it forms around particles of a metal catalyst Carbon nanotubes are a recently discovered allotrope of carbon Three other allotropes of carbon buckyballs graphite and diamond are illustrated at the left as is the molecule methane CH₄ from which nanotubes and buckyballs can be made The element carbon forms an amazing number of compounds with structures that follow from simple methane found in natural gas to the complex macromolecules that serve as the basis of life on our planet The study of chemistry also follows from the simple to the more complex and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement

Lippincott, 1977-01-01 Chemistry (Student) Dennis Englin, 2018-02-08 What is chemistry It is the study of the composition structure and properties of matter It is through an understanding of chemistry that the products that have benefited society were discovered and technologies to sustain the environment were put in place Knowledge taught in this course of how matter changes will give us an insight into the origin of life so we can realize that life could only have been formed by a supernatural act of creation not by a process of change over time High school science course with lab curriculum Lab experiments are included with step by step images for guidance Based on the principle that those who can understand and apply information do much better than those who simply memorize material This course has been taught by Dr Englin for many years with students going on to medical and graduate school He wanted to develop a series of courses that would give students the tools to help them succeed in higher education The comprehensive material has God the Creator as its foundation A teacher guide is available for Chemistry providing this full year science course with a detailed schedule worksheets and tests **Chemistry** James E. molecular level are related to properties we observe at the macroscopic level The unique chemical tools approach employed in this book provides a way of thinking that helps those students develop the ability to analyse and solve both mathematical and conceptual problems This text follows the successful three step approach described as ANALYSIS SOLUTION and IS THE ANSWER REASONABLE This encourages the student to think about the problem before attempting to solve it then working through the solution and finally asking the important question Does the answer make sense There are problem sets called Bringing It Together that contain problems which require students to bring together concepts from two or more of the preceding chapters This reinforces learned concepts and builds concept mastery
