*Chemometrics* S.N. Deming, Y. Michotte, D.L. Massart, L. Kaufman, B.G.M. Vandeginste, 1988-02-01 Most chemists whether they are biochemists organic analytical pharmaceutical or clinical chemists and many pharmacists and biologists need to perform chemical analysis Consequently they are not only confronted with carrying out the actual analysis but also with problems such as method selection experimental design optimization calibration data acquisition and handling and statistics in order to obtain maximum relevant chemical information In other words they are confronted with chemometrics This book on chemometrics written by some of the leaders in the field aims to provide a thorough up to date introduction to this subject The reader is given the opportunity to acquaint himself with the tools used in this discipline and the way in which they are applied Some practical examples are given and the reader is shown how to select the appropriate tools in a given situation As such the book provides the means to approach and solve analytical problems strategically and systematically without the need for the reader to become a fully fledged chemometrician The authors aim was to write a tutorial book which would be useful to readers at every level in this field
