Chemical Grouts for Soils G. R. Tallard, C. Caron, 1977 The essence of this research is the search for more economical grouts not directly dependent on petroleum The study has required an extensive investigation of 75 years of knowledge on chemical grouts in order to clear out the present diaspora of products From this a general classification of chemical grouts has been proposed based on the nature of the major component The grout materials were evaluated on the basis for several factors injectability permeability setting time strength of pure grout strength of grouted soil durability toxicity Grout families of substantial interest have been tested following these standards further a selected number of grouts have been tested for possible improvement These tests indicate that lignochrome gels and furan resin derivatives are particularly promising
