Reaction Kinetics and Reactor Design, Second Edition John B. Butt, 2000-01-03 This text combines a description of the origin and use of fundamental chemical kinetics through an assessment of realistic reactor problems with an expanded discussion of kinetics and its relation to chemical thermodynamics It provides exercises open ended situations drawing on creative thinking and worked out examples A solutions manual is also available to instructors

Metal Hydrides William M. Mueller, James P. Blackledge, George G. Libowitz, 2013-09-12 Metal Hydrides focuses on the theories of hydride formation as well as on experimental procedures involved in the formation of hydrides the reactions that occur between hydrides and other media and the physical and mechanical properties of the several classes of hydrides The use of metal hydrides in the control of neutron energies is discussed as are many other immediate or potential uses e g in the production of high purity hydrogen and in powder metallurgy It is hoped that this book will serve as a valuable reference to students research professors and industrial researchers in metal hydrides and in allied fields Selected chapters may serve specialists in other fields as an introduction to metal hydrides The information contained herein will also be of lasting and practical value to the metallurgist inorganic chemist solid state physicist nuclear engineer and others working with chemical or physical processes involving metal hydrogen systems

An Introduction to the Principles of Surface Chemistry R. Aveyard, D. A. Haydon, 1973-08-30

Isotopic Assessment of Heterogeneous Catalysis John Happel, 2012-12-02 Isotopic Assessment of Heterogeneous Catalysis deals with the use of isotopic tracing to study the reaction mechanisms involved in heterogeneous catalysis It presents special methods for using isotopic and radioactive atomic species for obtaining meaningful kinetic data that can be quantitatively used in mechanistic modeling It also considers a number of industrial reactions under steady state reaction conditions in which superposed tracer transfer is also at steady state This book is comprised of eight chapters and begins with an introduction to heterogeneous catalysis and an approach to reaction modeling as well as the experimental reactors for obtaining the type of measurements and data needed in transient modeling The application of isotopes in studies of heterogeneous catalysis is also discussed Subsequent chapters focus on the choice of intermediates and reaction steps in tracer experiments the number of overall stoichiometric chemical reactions that can occur in order to generate product molecules from reactants superposition modeling of mechanisms and steady state tracing Transient tracing and the development of rate equations are also described This monograph is intended primarily for students and teachers of such subjects as physical chemistry as well as research scientists and technologists

Metal-Catalysed Reactions of Hydrocarbons Geoffrey C. Bond,2006-10-03 This unique book drawing on the author s lifetime experience critically evaluates the extensive literature on the field of Metal Catalysed Reactions of Hydrocarbons Emphasis is placed on reaction mechanisms involving hydrogenation hydrogenolysis skeletal and positional isomerisation and exchange reactions The motivation for fundamental research in heterogeneous catalysis is to identify the physicochemical characteristics of active centres for the reaction being studied to learn how these may be modified or manipulated to improve the desired behavior of the catalyst and to recognize and control those aspects of the catalyst s structure that limit its overall performance By restricting the subject of the book to hydrocarbons Bond has progressively developed the subject matter to include areas of importance both to researchers and to those working in the industry

1965 Transactions of the Third International Vacuum Congress H. Adam,2016-04-16 1965 Transactions of the Third International Vacuum Congress Volume 1 Invited Papers is the first of two volumes that review the state of knowledge in vacuum technology The present volume comprises the opening address by Prof Auw rter and the twelve comprehensive main lectures In keeping with the purpose of an international congress the organizers took great pains to ensure that the choice of topics for the main lectures not only covered the scientific fundamentals as a whole but also gave appropriate consideration to the technical applications An analysis of the submitted topics shows that the strong points of research and development lie in the fields of Coating and Thin Layers Adsorption and Desorption and Pressure Measurement and Leak Detection In the fields of application Vacuum Metallurgy ranks highly The papers published in the transactions originate from many European and overseas countries proof that vacuum science is not only keenly pursued in all major industrial countries but also that the new organizational form of the IUVSTA is capable of winning the services of all these countries for fruitful international cooperation in the vacuum field
