Abiotic Stress Adaptation and Tolerance Mechanisms in Crop Plants Jiban Shrestha, Ji-Hong Liu, Bhaskar Gupta, Mirza Hasanuzzaman, 2024-06-27 Agricultural communities are being affected by climate change Droughts heat waves cold snaps and flooding are all regarded as severe threats to crop production as they hinder plant growth and development resulting in yield losses Plants respond to stress through a complex process that includes changes in physiological and biochemical processes gene expression and alterations in the amounts of metabolites and proteins at different developmental stages This special issue will focus on recent advances in the use of various traditional and modern biotechnological strategies to understand stress adaptation and tolerance mechanisms including but not limited to genomics transcriptomics metabolomics proteomics miRNA genome editing transgenic plants exogenous application of plant growth regulators and so on Abiotic stress is a key constraint to agricultural production around the world Water deficit excess precipitation high and low temperature and salinity are the most prevalent abiotic stresses Compaction mineral availability and pH related stressors are among the others This Research Topic aims to highlight the most recent breakthroughs in plant responses to abiotic stresses and adaptation tolerance strategies This special issue provides the advanced toolkit and technologies that are used to investigate and understand plant responses to abiotic stress The purpose of this special issue is to give a platform for scientists and academics from across the world to promote share and discuss new concerns and advancements in the field of abiotic stress in plants Current updates and recent developments in the physiological molecular and genetic perspectives on combined and sequential stress responses and tolerance in field crops are expected in articles Original research and review articles dealing with abiotic stress are welcomed In this special issue potential topics include but are not limited to Physiological biochemical and molecular responses of plants under abiotic stress Systems biology approaches to study abiotic stress in crop plants Phenotyping for abiotic stress tolerance in crops Physiological and molecular characterization of crop tolerance to abiotic stresses Molecular breeding for developing and improving abiotic stress resilience in crops Microbial mitigation of abiotic stress responses in crops Omics technologies for abiotic stress tolerance in plants Performance of novel GMO crops under abiotic stress conditions CRISPR Cas Genome editing tools for the Improvement of abiotic stress tolerance in plants Crop production in abiotic stress conditions

Signal Crosstalk in Plant Stress Responses Keiko

Yoshioka, Kazuo Shinozaki, 2009-08-11 Signal Crosstalk in Plant Stress Responses focuses on current findings on signal crosstalk between abiotic and biotic stresses including information on drought cold and salt stress and pathogen infection Divided into seven chapters on critical topics in the field the book is written by an international team of expert authors The book is aimed at plant scientists agronomists and horticulturalists as well as students

Cherries Jose Quero-Garcia, Amy Iezzoni, Joanna Pulawska, Gregory A Lang, 2017-07-12 Sweet and sour cherries *Prunus avium* and *Prunus cerasus* are important fruit crops for which demand is high and growing A significant number of new varieties rootstocks and training

systems have been released or developed in recent years in order to improve the efficiency and profitability of cherry orchards Cherries Botany Production and Uses covers the genetics ecophysiology production protection and uses of cherries Presenting up to date scientific data and applied information this book is invaluable for researchers teachers and all professionals working in the cherries value chain *Abiotic Stress Adaptation in Plants*, 2010 Genetics and epigenetics: Plausible role in development of climate resilient crops Vijay Gahlaut, Abhishek Bohra, Dragan Perovic, Rajeev K. Varshney, 2023-04-13 **Advances in Plant Dormancy** James V. Anderson, 2015-04-30 Plant dormancy involves synchronization of environmental cues with developmental processes to ensure plant survival however negative impacts of plant dormancy include pre harvest sprouting non uniform germination of crop and weed seeds and fruit loss due to inappropriate bud break Thus our continued quest to disseminate information is important in moving our understanding of plant dormancy forward and to develop new ideas for improving food feed and fiber production and efficient weed control particularly under global climate change Proceeding from the 5th International Plant Dormancy Symposium will provide an overview related on our current understanding of how environmental factors impact cellular molecular and physiological processes involved in bud and seed dormancy and perspectives and or reviews on achievements which should stimulate new ideas and lines of investigation that increase our understanding of plant dormancy and highlight directions for future research *The Americana*, 1908 Crop Resistance Mechanisms to Alleviate Climate Change-Related Stress Jose Ramon Acosta Motos, Juan De Dios Franco-Navarro, Sara Álvarez, María José Gómez-Bellot, 2024-02-20 Anthropogenic activities have aggravated the effects of global climate change on ecosystems Plants because of their inability to escape from an adverse environment suffer to a great extent from stresses which can negatively impact their growth and development Global warming is increasingly causing extreme climatic situations such as very high or low temperatures drought and flooding events hailstorms wildfires extreme precipitation events and the reduction of fertile soil through desertification and salinization In addition warmer temperatures and higher humidity related with the climate change can also increase pest and disease pressure on plants by altering the geographic range population size and timing of pest and disease outbreaks Taken together abiotic stress related with climate change as drought or extreme temperature can exacerbate the spread and severity of various diseases associated with biotic stress increasing the vulnerability of plants to pathogens some examples include insects fungi bacteria or viruses **Plant Signaling Molecules** M. Iqbal R. Khan, Palakolanu Sudhakar Reddy, Antonio Ferrante, Nafees A Khan, 2019-03-15 Plant Signaling Molecule Role and Regulation under Stressful Environments explores tolerance mechanisms mediated by signaling molecules in plants for achieving sustainability under changing environmental conditions Including a wide range of potential molecules from primary to secondary metabolites the book presents the status and future prospects of the role and regulation of signaling molecules at physiological biochemical molecular and structural level under abiotic stress tolerance This book is designed to enhance the mechanistic understanding

of signaling molecules and will be an important resource for plant biologists in developing stress tolerant crops to achieve sustainability under changing environmental conditions Focuses on plant biology under stress conditions Provides a compendium of knowledge related to plant adaptation physiology biochemistry and molecular responses Identifies treatments that enhance plant tolerance to abiotic stresses Illustrates specific physiological pathways that are considered key points for plant adaptation or tolerance to abiotic stresses
