

# COGNITIVE DEVELOPMENT

Cognitive development is the mental process through which how humans acquire, make sense of, and use information.

## DEFINITION

As the brain matures, cognitive development becomes more complex. Cognitive development begins before birth and advances right through to the mid-20s, involving increasingly more complex mental processes such as abstract thinking, innovation, and scientific reasoning. After the mid-20s, we can still learn and develop, but cognitive development plateaus.

## EXAMPLES

**Primary circular reactions (1-4 months):** Babies start to follow objects as they move. They can track a ball rolling along the floor.

**Development of inductive reasoning (7-11 years):** Children start to make generalizations from personal experiences.

**Metacognition (11+ years):** People begin to reflect upon their own thinking processes, helping them to enhance their learning skills and speed.

**The Development of Word Meaning** Stan Kuczaj, Martyn D. Barrett, 2012-12-06 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the advanced types carrying the subtitle *Progress in Cognitive Development Research*. Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research, e.g. logical and mathematical development, development of learning. All Progress volumes will be edited collections. Editors of such collections, upon consultation with the Series Editor, may elect to have their books published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors are being published as separate volumes within the series. A fairly broad definition of cognitive development is being used in the selection of books for this series.

Concept Development and the Development of Word Meaning T. B. Seiler, W. Wannenmacher, 2012-12-06 This volume owes its existence to many different sources and influences. It is based on a meeting that took place from April 30 to May 2, 1982, at the University of Technology in Darmstadt. The idea for that meeting came while we were elaborating a research program on concept development and the development of word meaning. We were inspired by Werner Deutsch of the Max Planck Institute for Psycholinguistics in Nijmegen, The Netherlands, and by the Volkswagen Foundation in Hannover, Federal Republic of Germany, to organize an international conference on the same topic. We set out to invite a long list of colleagues and we only regret that not all of them were able to attend. This volume should not be viewed as the proceedings of that conference. On the one hand it does not include all of the papers presented there and on the other hand some of our colleagues who were unable to attend were nevertheless willing to write contributions. Furthermore, some who did present papers at the conference revised and reformulated them or even submitted completely new ones for this book. We feel, however, that in the end we have arranged a valuable collection of work in the theory and research of a field that has occupied not only psychologists and linguists but also philosophers, anthropologists, and many others for a long time.

**From Meaning to Definition** Rita Patricia May Watson, 1982

The Acquisition of Word Meanings Heinz Werner (Linguist), 1952 The child acquires the meaning of words principally in two ways. One is by explicit reference, either verbal or objective; he learns to understand verbal symbols through the adult's direct naming of objects or through verbal definition. The second way is through implicit or contextual reference; the meaning of a word is grasped in the course of conversation, i.e. it is inferred from the cues of the verbal context. The

present study endeavors to investigate experimentally the processes underlying the acquisition of word meaning through verbal contexts For this purpose the Word Context Test WCT was designed This test employs artificial words embedded in sentences The subject going from one context to another is expected to arrive finally at the meaning of the word Each of these artificial words signifies either an object or an action varying in degrees of concreteness There are twelve series of six sentences each The sentences in each series are in general ordered in such a way that as a child moves from one sentence to the next the clues increase in definiteness The subjects considered in this investigation were children between the ages of 8 yrs 6 mo and 13 yrs 5 mo The interquartile I Q range was from 101 to 111 In all 125 children 60 boys and 65 girls were tested there were 25 children in each age group The monograph is divided into three parts Section I deals with a detailed qualitative and quantitative analysis of the results Section II reviews synoptically the results reported in Section I and attempts to evaluate these results in terms of general laws of development The third section relates the findings of the present study to other empirical and experimental investigations PsycINFO Database Record c 2007 APA all rights reserved

**Development of Word Meaning Through the Language Experience Approach** Mildred F. Wray, 1979 **The Growth of Word Meaning** Jeremy M. Anglin, 1961-04-01 Somewhere between birth and maturity the highly structured linguistic system characteristic of the adult mind evolves While young children commonly group words idiosyncratically or according to a thematic principle adults prove more homogeneous in obeying conceptual categories A gradual transition between two age extremes and their modes of organizing language can be mapped in detail The several experiments presented in this volume are designed to tap the growth of appreciation of relations among 20 specific words though inferences drawn from the data may be applicable to much of the lexicon Where empirical evidence to date is scant in the area of semantic evolution Jeremy Anglin establishes the hypothesis that development proceeds from the concrete to the abstract As tools to survey the architecture of cognitive capacities he adopts and adapts traditional verbal learning and psycholinguistic techniques and applies them to subjects ranging in age from 7 to 26 years The experiments and their findings are described clearly enough to be readily understood by the general reader A blend of preconceptions and perplexities gave rise to Dr Anglin's experiments which included sorting free recall free association and concept formation tasks Four biases concerning the nature of words governed selection of the tasks the set of words and the methods of analysis First the word contains meaning which can be identified in part with the features or criterial properties associated with it Next words cohere in a system in which many features can be organized hierarchically or in theoretical nests Third the meaning of a word is often derived from the contexts in which it occurs and similarity of meaning among words relates to privileges of occurrence within the same context Finally the word as a social tool whose function is to communicate is useless unless it means the same thing to different members of a linguistic community All the verbal tasks chosen could be administered to children with ease and words selected were presumed to be within the vocabularies of the youngest subjects

tested Major findings of most tasks supported the concrete abstract progression A persistent puzzle for proponents of this theory however is the ubiquitous phenomenon that children of about 4 years of age can spontaneously speak the language giving parts of speech their proper grammatical treatment despite the fact that young children in the various experiments consistently ignore the form class distinctions that are so important to adults Employment of such principles and cognizance of them may reflect very different abilities Semantic development appears to be an extremely prolonged process which may never be complete Patterns of interrelations revealed among the host of experimental methods suggest that many results may reflect different aspects of the same underlying cognitive capacities Dr Anglin s novel application of multidimensional scaling procedures to meaningful psychological data provides a graphic illustration of the various stages of the growth of the subjective lexicon MIT Research Monograph No 63
