Cox, 2015-11-06 This study examines the development and usefulness of US air attack theory and doctrine during the interwar period 1919 1941 This period represents more than twenty years of development in US Air Corps attack theory and doctrine It was the first peacetime period of such development Attack aviation during this time was a branch of aviation used to provide direct and indirect combat support to ground forces in the form of machine gun strafing light bombing and chemical attacks From the earliest origins attack theory and doctrine evolved primarily along two paths direct and indirect support of ground and air force objectives The direct support approach was based on fundamental beliefs by the Army that attack aviation was an auxiliary combat arm to be used directly on the battlefield against ground forces and to further the ground campaign plan The indirect support approach or air interdiction was derived from the fundamental beliefs by the Air Corps that attack aviation was best used beyond the battle line and artillery range against targets more vulnerable and less heavily defended to further both the Air Force mission and the ground support mission As attack doctrine evolved range and hardened targets became problematic for the single engine attack plane Thus attack theory and doctrine in terms of the indirect support approach was adequately developed to be useful at the start of WWII The use of light and

medium bombers in North Africa showed the effectiveness of air interdiction and the indirect approach. Attack aviation had indeed established itself before WWII. Attack aviation in the form of close air support would have to wait for the lessons of WWII. *The Development of Air Doctrine in the Army Air Arm* Air University (U.S.). The Development of Air Doctrine in the Army Air Arm, [The Development of Air Doctrine in the Army Air Arm, 1917-1941](#), 1977 **Ideas, Concepts, Doctrine** Robert Frank Futrell, 1971 **Military Transformation Past and Present** Mark D. Mandeles, 2007-09-30 Transformation has become a buzz word in today's military but what are its historical precursors those large scale changes that were once called Revolutions in Military Affairs RMA Who has gotten it right and who has not The Department of Defense must learn from history Most studies of innovation focus on the actions choices and problems faced by individuals in a particular organization Few place these individuals and organizations within the complex context where they operate Yet it is this very context that is a powerful determinant of how actions are conceived examined and implemented and of how errors are identified and corrected The historical cases that Mandeles examines reveal how different military services organized to learn accumulate and retrieve knowledge and how their particular organization affected everything from the equipment they acquired to the quality of doctrine and concepts used in combat In cases where more than one community of experts was responsible for weighing in on decisionmaking the service benefited from enhanced application of evidence sound inference and logic These cases demonstrate that for senior leadership participating in such a system should be a strategic and deliberate choice In each of the cases featured in this book no such deliberate choice was made The interwar U S Navy USN aviation community and the U S Marine Corps amphibious operation community were lucky that in a time of rapid technological advance and strategic risk their decisions in framing and solving technological and operational problems were made within a functioning multi organizational system The Army Air Corps and the Royal Marines were unfortunate with corresponding results It is characteristic of 20th century military history that no senior civilian or military leader suggested a policy to handle overlapping responsibilities by multiple departments Today's policymakers have not learned this lesson In the present time while a great deal of thought is devoted to proper organizational design and the numbers of persons required to perform necessary functions there is still no overarching framework guiding these designs
