Child Development and Behavioral Pediatrics Marc H. Bornstein, Janice L. Genevro, 2014-09-03 Being sick is a normal part of childhood and being seriously ill is the unfortunate lot of many children Every child in the United States has some contact with the healthcare system at some time and it is estimated that one of every two children or adolescents is hospitalized as a result of illness or injury Being injured undergoing routine medical procedures getting sick or being hospitalized confront children with challenges on many levels physical mental emotional and social The premise of this volume is that developmental and psychological factors are central elements in many current problems in child health such as persistent crying in infants sources of children's injury and respiratory illness children's coping with medical procedures childhood trauma and physical and mental well being in adolescence Understanding promoting and maintaining children's health therefore depend to a great extent and are likely to depend even more in the future on elucidating the determinants and consequences of children's and parents health related behaviors and attitudes Chapter contributors include physicians and psychologists who apply principles of developmental and social psychology to their research on specific problems in children's health Their offerings delineate current areas of collaboration between developmental psychology and behavioral pediatrics These perspectives should prompt researchers and practitioners to explore additional ways in which more extensive endeavors at the interface of these two disciplines will facilitate efforts to understand children's health behaviors and foster children's well being Attention to this work should lead to more direct clinical applicability and translation for preventive policy strategies as well as therapeutic interventions

Theory and Research in Behavioral Pediatrics Hiram E. Fitzgerald, Barry M Lester, Michael W. Yogman, 2013-06-29 Volume I of Theory and Research in Behavioral Pediatrics focused on issues of early human development with special emphasis given to assessment of the preterm infant and to factors influencing the organization of the caregiver infant relationship Chapters in Volume 2 cover a broader range of topics and encompass a wider age span Chapter I provides a historical review of the relationship between developmental psychology and pediatrics The authors Barbara R Tinsley and Ross D Parke discuss differences between behavioral pediatrics and pediatric psychology and note that interdisciplinary collaboration in research and application has increased steadily in recent years However if similar collaborative efforts are to occur in education and training of pediatricians and developmental psychologists it will be necessary to determine just what each discipline hopes to gain from such collaborative efforts Tinsley

and Parke report the results of a national survey designed to determine the areas of developmental psychology that pediatricians perceive to be of potential benefit to them in their delivery of pediatric care. Results of the survey suggest that there are many ways in which developmental psychology could be incorporated into the pediatric curriculum. In many respects, Chapter 2 sets the stage for the remaining chapters. Nancy A. Carlson and Thomas Z.
