Ann-Christine Albertsson,2004-04-22     *Developments in Polymer Stabilisation—8* G. Scott,2012-12-06 The purpose of the  
present series of publications is two fold In the first place it is intended to review progress in the development of practical  
stabilising systems for a wide range of polymers and applications A complementary and ultimately more important objec tive  
is to accommodate these practical developments within the framework of antioxidant theory since there can be little question  
that further major advances in the practice of stabilisation technology will only be possible on the basis of a firm mechanistic  
foundation Research into the role of stable free radicals as antioxidants and stabilisers for polymers has intensified in recent  
years Nitroxyl radicals nitroxides were the earliest long lived radicals to be investi gated in detail and Maslov and Zaikov  
review the developments that have taken place in understanding their reaction mechanisms from the time when they were  
first investigated in liquid hydrocarbon systems to the present day when their outstanding performance as light stabilisers  
has been the object of much scientific research Although some features of their reactivity remain obscure the authors  
approach the problem kinetically and indicate the factors limiting their effectiveness     **Reactive Modifiers for Polymers**  
S. Al-Malaika,1997-06-30 There is considerable interest within the polymer industry in developing methods to modify existing  
polymer systems to achieve improvements in their functional or engineering properties The chemical treatment of polymers  
either prior to or during processing represents an inexpensive and rapid way of achieving these modifications and a great  
deal of research is underway directed at improving both the understanding of the processes involved and the development of  
the practical techniques employed The improvements obtained by chemical treatment range from subtle alteration of the  
chemical properties of a polymer to wholesale changes in the physical mechanical and chemical properties with the current  
favourable economics ensuring that industry will continue to exploit the technique in the search for improved polymer  
materials Written by an international team of authors drawn from both basic and applied research programmes in industry  
and academia and with a strong emphasis on the underlying chemistry this book forms a timely concise and accessible  
evaluation of the most promising technologies developed to date Chemists technologists materials scientists and engineers  
working in all areas of the polymer industry along with academic researchers in those fields will find this book an essential
