## **Diagnostic And Interventional Catheterization In Congenital Heart Disease:**

**Diagnostic and Interventional Catheterization in Congenital Heart Disease** James E. Lock, John F. Keane, Stanton B. Perry, 2000 Cardiac catheterization has long been a central diagnostic modality in the evaluation of children adolescents and adults with congenital heart disease and in children with acquired heart disease Over the past two decades transcatheter interventions have become equally important in the treatment of pediatric and congenital heart disease Some transcatheter therapies have become established as the standard of care for congenital cardiovascular anomalies previously managed surgically others serve to supplement surgery in the integrated management of complex lesions and still others are in their infancy as pediatric interventional cardiology continues to advance in step with the broader field of pediatric cardiovascular medicine Since the previous edition of this book new technologies and techniques have been introduced to the field of pediatric interventional cardiology much has been learned about established transcatheter therapies and there has been a substantial increase in the volume of published data on outcomes of transcatheter procedures in congenital and pediatric heart disease With increasing experience the role of interventional catheterization has become solidified as an integral component of the comprehensive management of patients with essentially all forms of congenital heart disease Cardiac catheterization has also become established as a distinct subspecialty within the discipline of pediatric cardiology and at many centers has become the purview of cardiologists who have received specialized training in interventional catheterization and whose practice is focused on catheterization This book is targeted to trainees and established interventional cardiologists alike and is intended as a comprehensive reference for the clinical practice of diagnostic and interventional cardiology in pediatric and congenital heart disease In the organization of this book a combination of procedure based and problem based approaches has been employed The structure of the book has been updated to make it more reader friendly chapters have been added to address new techniques and problems in the field and greater emphasis has been placed on evaluation of outcomes of transcatheter interventions in congenital heart disease Section 1 covers the fundamentals of cardiac catheterization with chapters devoted to pre procedure patient evaluation sedation and anesthesia vascular access and related issues catheterization equipment and its use hemodynamic evaluation angiography radiation and radiation safety and echocardiography in the catheterization lab Sections 2 through 4 include procedure based chapters that are organized according to the technical type of intervention Section 2 is devoted to transcatheter interventions for obstructive lesions including valvar stenoses and vascular obstructions Section 3 includes chapters that cover interventions to close various pathologic intracardiac communications and vascular anomalies Section 4 includes chapters covering interventions performed to create or enlarge intracardiac communications as well as other interventions Section 5 focuses on the applications of catheterization and transcatheter interventions in the evaluation and management of specific patient populations This problem based or patient based focus which is substantially expanded from the previous edition of the book

reflects the expanding role of catheterization in the comprehensive management of pediatric and congenital heart disease and addresses emerging applications of transcatheter interventions including management of the patient receiving extracorporeal circulatory support hybrid transcatheter surgical interventions and prenatal cardiac intervention Section 6 includes two chapters that cover outcome assessment and regulatory issues pertinent to the pediatric cardiology in general and interventional cardiology in particular Diagnostic and Interventional Catheterization in Congenital Heart Disease James E Lock, John F Keane, Kenneth E Fellows, 1987-01-01 Cardiac Catheterization in Congenital Heart Disease Charles E. Mullins, 2008-04-15 The rapidly growing population of adults surviving with congenital heart lesions along with the success of interventional cardiology in the child and adolescent has spawned an incredible interest in adapting the technology for the adult congenital patients Dr Mullins a pioneer in this area has written an outstanding reference which covers all aspects of performing diagnostic and therapeutic cardiac catheterization procedures on patients of all ages This illustrated book details the equipment and techniques for performing safe and successful procedures with a strong emphasis on avoiding complications It also includes the requirements of a catheterization laboratory for congenital heart patients as well as guidance for setting up and operating such a laboratory Cardiac Catheterization in Congenital Heart Disease serves as an essential manual for pediatric and adult interventional cardiologists worldwide **Cardiac Catheterization for Congenital Heart Disease** Gianfranco Butera, Massimo Chessa, Andreas Eicken, John Thomson, 2014-10-15 This handbook is an ideal up to date guide to the application of catheter based interventions across the entire patient age range from fetal life through to adulthood Clear instruction is offered on techniques of vascular access valve dilatation angioplasty stent implantation defect closure defect creation pulmonary valve implantation and the hybrid approach as well as miscellaneous other procedures Topics are approached using a step by step format ensuring that the reader will immediately be able to access information relevant to daily practice Many explanatory figures and drawings are included in each chapter in order to clarify further how to plan perform and evaluate diagnostic and interventional procedures in the field of congenital heart disease Attention is drawn to important tips and tricks that will assist in achieving optimal outcomes and an appendix includes additional general equations and BSA and oxygen consumption charts Atlas of Cardiac Catheterization for Congenital Heart Disease Gianfranco Butera, Massimo Chessa, Andreas Eicken, John D. Thomson, 2019-03-11 This atlas depicts and describes catheter based interventions across the entire pediatric age range from fetal life through to early adulthood with the aim of providing an illustrated step by step guide that will help the reader to master these techniques and apply them in everyday practice Clear instruction is offered on a wide range of procedures including vascular access fetal interventions valve dilatation angioplasty stent implantation defect closure defect creation valve implantation hybrid approaches and other miscellaneous procedures The atlas complements the previously published handbook Cardiac Catheterization for Congenital Heart Disease by presenting a wealth of photographs images and drawings selected or

designed to facilitate the planning performance and evaluation of diagnostic and interventional procedures in the field of congenital heart disease It will assist in the safe efficient performance of these procedures in decision making and in the recognition and treatment of complications
