Diagnosis Control Of Johnes Disease:

Diagnosis and Control of Johne's Disease National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Diagnosis and Control of Johne's Disease, 2003-09-13 Johne's Disease is a chronic progressive intestinal disease caused by infection with *Mycobacterium avium* subspecies *paratuberculosis* Map that affects primarily ruminant animals. In recent decades there has been growing concern over the lack of effective control of this disease and questions have arisen regarding the possibility that Map infection could be a cause of some cases of Crohn's disease in humans. This report presents a broad outline of the steps that should be taken to control Johne's disease, reduce the spread of Map, and minimize effects of the disease in animals. The report also describes the weaknesses of our current research agenda and provides recommendations for a new research strategy to resolve the question of whether there is a link between Johne's and Crohn's diseases. *Johne's Disease* AR Milner, 1989. Johne's disease (paratuberculosis) afflicts cattle worldwide and causes significant economic losses. It is also prevalent in goats and sheep and has been implicated in Johne's disease in humans. The book is divided into six sections covering all aspects of the prevalence, management, diagnosis, control, and research on Johne's disease. Johne's disease is an international animal health problem and is of particular importance in the southern States of Australia, especially in the major dairy areas of Victoria, where approximately 10% of dairy herds are infected.

Major changes have recently taken place in the value attached to components of milk. Although approximately half the energy in milk is contained in fat, fat is rapidly decreasing in value relative to protein. This has come about because of the increased availability of competitively priced plant derived edible oils and because of the perceived health problems associated with animal fat in the human diet. Such changes have major implications for the dairy sector, particularly in developed countries. Against this background, this book presents a timely review of developments in milk production and consumption, of changes in milk component values, and of the opportunities that biotechnology provides to alter the composition of and add value to milk on the farm. The subject coverage is very broad, ranging from nutritional aspects of pastures and forages to rumen microbiology.

genetics and reproductive technologies milk biochemistry and environmental implications It is based on a conference held in Wellington New Zealand in February 1996 and sponsored by the OECD and AgResearch Contributors include leading research workers from North America Europe Japan Australia and New Zealand It provides an invaluable overview of the subject suitable as a reference book for advanced students researchers and advisers in dairy science as well as related disciplines such as grassland nutritional and food sciences *The Dairy World and the British Dairy Farmer* ,1930
