Basic Processes In Memory Development Progress In Cognitive Development Research:

Basic Processes in Memory Development C.J. Brainerd, M. Pressley, 2013-11-11 For some time now the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely edited collections of original chapters by several authors and original volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the advances type carrying the subtitle *Progress in Cognitive Development Research*. Each volume in the Progress sequence is strongly thematic in that it is limited to some well defined domain of cognitive developmental research, e.g. logical and mathematical development, development of learning. All Progress volumes will be edited collections. Editors of such collections, upon consultation with the Series Editor, may elect to have their books published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors are being published as separate volumes within the series. The Development of Memory in Childhood Nelson Cowan, 1997 One of the most important and fascinating aspects of human growth is the development of memory, a person's mental record of the past. This book aims to provide an original in-depth analysis of current areas of research on memory development. **Handbook of Research on Schools, Schooling and Human Development** Judith L. Meece, Jacquelynne S. Eccles, 2010-06-10 Children spend more time in school than in any social institution outside the home. And schools probably exert more influence on children's development and life chances than any environment beyond the home and neighbourhood. The purpose of this book is to document some important ways schools influence children's development and to describe various models and methods for studying schooling effects. Key features include: Comprehensive Coverage: this is the first book to provide a comprehensive review of what is known about schools as a context for human development. Topical coverage ranges from theoretical foundations to investigative methodologies and from classroom level influences such as teacher-student relations to broader influences such as school organization and educational policies. Cross-Disciplinary: this volume brings together the divergent perspectives, methods, and findings of scholars from a variety of disciplines, among them educational psychology, developmental psychology, school psychology, social psychology, psychiatry, sociology, and educational policy. Chapter Structure: to ensure continuity, chapter authors describe: 1) how schooling influences are conceptualized; 2) identify their theoretical and methodological approaches; 3) discuss the strengths and weaknesses of existing research; and 4) highlight implications for future research practice and policy. Methodologies: chapters included in the text feature various methodologies, including longitudinal studies, hierarchical linear models, experimental and quasi-experimental designs, and mixed methods. *Memory Performance and Competencies*

Franz E. Weinert, Wolfgang Schneider, 1995 Research on memory development has accumulated over the past few years Given the number of relevant publications in the field it becomes increasingly difficult to keep track of major advances in specific areas of memory development This book illustrates 2 purposes to permit experts in the various subdomains of research in memory development to summarize recent findings concerning the respective roles of capacity strategies and knowledge in the acquisition of memory skills and to discuss cross cutting topics such as the influence of individual differences practical and educational implications and the potential of longitudinal studies
