*Exploring Motor Imagery Across the Lifespan - Gaps Between Practical Applications and Theoretical Frameworks* Pedro Alexandre Duarte-Mendes, Daniel Marinho, Maurizio Bertollo, André Ramalho, 2025-10-31

Motor imagery MI a multisensorial mental representation of the image of actions or objects and situations without an actual experience and without appropriate sensory input that activates motor control regions in the brain without physical execution provides insights into the link between motor control and cognitive function This process promotes learning and improves motor skills often in combination with physical practice in both healthy and clinical populations It is therefore used in various areas such as education rehabilitation music and sport throughout the human lifespan In the first years of life the development of MI runs parallel to neuronal and physical growth which has a positive effect on learning and provides information about developmental disorders In adults especially athletes MI improves skills optimizes performance and plays a key role in rehabilitation by enabling the restoration of neural pathways In advanced age MI can preserve mobility and cognitive function It can also mitigate age related cognitive decline and thus maintain quality of life by preserving neural plasticity Despite its importance across the human lifespan MI is a topic that requires further analysis as it remains unclear how different types of imagery and their associated cognitive processes differ This research topic aims to find an answer to this call by examining the central role of MI across the lifespan with a particular focus on its importance for cognitive development skill acquisition and rehabilitation Recent advances in neuroimaging and cognitive neuroscience have provided valuable insights into the neural basis of MI and introduced new methods that could revolutionize its practical application A thorough understanding of these mechanisms will enable the development of customized approaches that consider the specific needs of the tasks and the individuals involved This clarification will allow MI to be successfully integrated into educational programs sports training and rehabilitation therapies By tailoring interventions to different populations we can transfer the principles of physical training into MI practice to optimize motor learning and rehabilitation outcomes We welcome contributions that broaden our understanding of MI at all stages of life and focus on developmental aspects performance enhancement and rehabilitation We are particularly interested in original papers review articles and interdisciplinary studies that address but are not limited to the following research subtopics Neurophysiological basis of MI at different developmental stages The contribution of MI to sport and performance enhancement The use of MI in clinical and

rehabilitation settings Innovative methodological approaches to the evaluation and implementation of MI Contributions linking MI to advances in cognitive psychology neurology or Artificial Intelligence This Research Topic invites an array of contributions including but not limited to original research review papers systematic reviews with or without meta analysis and research methods all aiming to develop a holistic understanding of MI and promote its practical application in different age groups Handbook of Physical Education David Kirk, Doune Macdonald, Mary O'Sullivan, 2006-10-04 What is the condition of the field of Physical Education How is it adapted to the rise of kinesiology sport and exercise science and human movement studies over the last thirty years This Handbook provides an authoritative critical overview of the field and identifies future challenges and directions The Handbook is divided into six sections Perspectives and Paradigms in Physical Education Research Cross disciplinary Contributions to Research Philosophy Learning in Physical Education Teaching Styles and Inclusive Pedagogies Physical Education Curriculum and Difference and Diversity in Physical Education **Public Health, Public Health Education, and their Future Prospects** Xuelei Ma, Hubing Shi, Yihui Du, Wenhao Cai, 2024-04-15 A number of studies have pointed out that currently medical schools may have failed to supply self directed lifelong learners and qualified healthcare workers Therefore in recent years the medical teaching modes have been consistently reformed The new generation of novel education modes such as Research Based Learning RBL Problem Based Learning PBL Team Based Learning TBL have the characteristics of universality interactivity and promptness which empower instructors and students to learn and grow together Moreover the reform of medical teaching modes has been significantly facilitated in the COVID19 era due to public's rising awareness of public health and more obviously pandemic prevention policies such as travel restrictions For instance many countries have launched remote teaching mode in order to provide consistent education service with high quality These novel teaching modes can provide amelioration to the traditional education modes and may lead the education system to another prosperity **The Applied Research in Coaching and Athletics Annual**, 1999
