agenda pursued in the collected papers The introduction selectively presents the main results of the papers and attempts to illustrate many of them in terms of a common and canonical example namely a single unit auction with interdependent values It is our hope that the use of this example facilitates the presentation of the results and that it brings the main insights within the context of an important economic mechanism namely the generalized second price auction *Advances in Economic Theory: Volume 1* Econometric Society. [Bayesian Implementation in Exchange Economies with State Dependent Preferences and Feasible Sets](#) Guoqiang Tian,1999 This paper considers Bayesian and Nash implementation in exchange economic environments with state dependent preferences and feasible sets We fully characterize Bayesian implementability for both diffuse and non diffuse information structures We show that in exchange economic environments with three or more

individuals a social choice set is Bayesian implementable if and only if closure non confiscatority Bayesian monotonicity and Bayesian incentive compatibility are satisfied As such it improves upon and contains as special cases previously known results about Nash and Bayesian implementation in exchange economic environments We show that the individual rationality and continuity conditions imposed in Hurwicz et al 12 can be weakened to the non confiscatority and can be dropped respectively for Nash implementation Thus we also give a full characterization for Nash implementation when endowments and preferences are both unknown to the designer
