Angular Momentum And Mass Loss For Hot Stars:

Angular Momentum and Mass Loss for Hot Stars L.A. Willson, R. Stalio, 2012-12-06 Fundamental unsolved problems of stellar astrophysics include the effects of angular momentum on stellar structure and evolution the nature and efficiency of the processes by which angular momentum is redistributed within and lost from stars and the role that stellar rotation plays in enhancing or driving stellar mass loss There appears to be a qualitative change in the nature and efficiency of these mechanisms near spectral type FO hotter more massive stars typically retain more angular momentum at least until they reach the main sequence while cooler stars typically spin down quickly For the hotter stars recent work suggests a strong link between the type of pulsation behavior the mass loss rates and the rotation velocity If the same mechanisms are able to drive mass loss from the main sequence A stars as has recently been proposed then the current interpretations of a number of observations will be drastically affected e g the ages of clusters may be incorrect by up to a factor of two and the surface abundances of isotopes of He Li and Be may no longer give constraints on cosmological nucleosynthesis There are also effects on the evolution of the abundances of elements in the interstellar medium and on the general evolution of populations of stars Thus the questions of the mechanisms of angular momentum and mass loss of stars more massive than the sun is important not only for stellar studies but for the foundations of much of modern astrophysics

Old Stellar Populations

Santi Cassisi, Maurizio Salaris, 2013-08-29 The book discusses the theoretical path to decoding the information gathered from observations of old stellar systems It focuses on old stellar systems because these are the fossil record of galaxy formation and provide invaluable information on the evolution of cosmic structures and the universe as a whole The aim is to present results obtained in the past few years for theoretical developments in low mass star research and in advances in our knowledge of the evolution of old stellar systems A particularly representative case is the recent discovery of multiple stellar populations in galactic globular clusters that represents one of the hottest topics in stellar and galactic astrophysics and is discussed in detail Santi Cassisi has authored about 270 scientific papers 150 of them in peer reviewed journals and the title *Evolution of Stars and Stellar Populations*

The Future of Asteroseismology Joyce Ann Guzik, Markus Roth, 2021-08-17

Cosmic Magnetic Fields (IAU S259) International Astronomical Union. Symposium, 2009-06-11 Cosmic magnetic fields play a key role in the formation structure and evolution of planets stars and galaxies and possibly the Universe as a whole Magnetic fields of celestial bodies have been studied for a century since the discovery of the first extraterrestrial magnetic field by George Ellery Hale in 1908 but their origin and evolution remain open questions for fundamental physics and astrophysics IAU Symposium 259 presents the first interdisciplinary and yet comprehensive review of the role of magnetic fields on all scales that involved astronomers and physicists from across the community It gives a balanced account of both theoretical and observational aspects of topics ranging from Earth's habitability to the origin of the universe This volume gives a forefront research account on the current state of the art

Cyclical Variability in Stellar Winds L. KAPER

(Ed),1998-08-20 It is well known that stellar winds are variable and the fluctuations are often cyclical in nature This property seems to be shared by the winds of cool and hot stars even though their outflows are driven by fundamentally different physical mechanisms Since very similar models have been proposed to explain the cyclical wind variations observed in a wide variety of stars the time was ripe for astrophysicists from many different sub disciplines to present the state of the art in a concise form The proceedings will provide a useful up to date overview of the observations interpretation and modelling of the time dependent mass outflows from all sorts of stars **An Introduction to Close Binary Stars** R. W.

Hilditch,2001-03-12 Binary systems of stars are as common as single stars They are of fundamental importance because they allow stellar masses radii and luminosities to be measured directly and explain a host of diverse and energetic phenomena including X ray binaries cataclysmic variables novae symbiotic stars and some types of supernovae This 2001 book was the first to provide a pedagogical and comprehensive introduction to binary stars It combines theory and observations at all wavelengths to develop a unified understanding of binaries of all categories It comprehensively reviews methods for calculating orbits the Roche model ideas about mass exchange and loss methods for analysing light curves the masses and dimensions of different binary systems and imaging the surfaces of stars and accretion structures This book provides a thorough introduction to the subject for advanced undergraduate and graduate students Researchers will also find this to be an authoritative reference **Physics Briefs** ,1992 **Literature 1988, Part 2** Astronomisches

Nonisotropic and Variable Outflows from Stars Laurent Drissen, Claus Leitherer, Antonella Nota, 1992 *Journal of the Italian Astronomical Society Società astronomica italiana*, 1992 *Pulsation and Mass Loss in Stars* R. Stalio, L.A. Willson, 1988-07-31 Stellar mass loss is an essential part of the cycling of material from the interstellar medium into stars and back and must be understood if we are to model processes on galactic to cosmological scales The study of stellar winds and the effects of stellar mass loss has reached a particularly exciting stage where observational capabilities are increasingly able to provide interesting constraints on models and theories Recent results from theoretical and observational work for both hot and cool stars with substantial winds have led to the suggestion that a combination of pulsation with other mechanisms makes for particularly efficient mass loss from stars This provided the original motivation for the organization of this workshop The conference was organized along relatively conventional lines according to the types of objects being scrutinized However the true unity of the proceedings comes from the interplay of the mechanisms involved For example for the cool luminous Mira variables pulsation leads to shock waves that extend the atmosphere enhancing dust formation radiation pressure on dust drives the wind cooling the atmosphere and in some cases suppressing the shocks Similarly for the Be stars both pulsation in this case non radial and radiation pressure due to UV resonance lines are expected to be important and this expectation is at least qualitatively borne out by the

Whispering the Strategies of Language: An Emotional Quest through **Angular Momentum And Mass Loss For Hot Stars**

In a digitally-driven world wherever screens reign supreme and instant connection drowns out the subtleties of language, the profound techniques and mental nuances hidden within phrases usually get unheard. Yet, set within the pages of **Angular Momentum And Mass Loss For Hot Stars** a captivating literary value blinking with raw thoughts, lies a fantastic quest waiting to be undertaken. Composed by a talented wordsmith, this enchanting opus invites readers on an introspective trip, lightly unraveling the veiled truths and profound impact resonating within the fabric of each and every word. Within the psychological depths of the emotional evaluation, we shall embark upon a honest exploration of the book is primary styles, dissect its interesting writing style, and fail to the effective resonance it evokes heavy within the recesses of readers hearts.
