Animal Movement:

Animal Movement Across Scales Lars-Anders Hansson, Susanne Åkesson, 2014 This study takes a broad and timely approach to animal movement across both temporal and spatial scales Movement and migration on land in the air and in water are pervading features of animal life from the smallest protozoans to the largest whales and can extend from millimetres to global scale Research into animal movement ecology is now entering a new era with the development of novel molecular electronic and technical methods that make it possible to analyse the movements of individual animals under complex environmental conditions that determine the evolution of movement habits
