Animal Communication Networks:

Animal Communication Networks P. K. McGregor, 2005-03-31 Most animal communication has evolved and now takes place in the context of a communication network i.e. several signallers and receivers within communication range of each other This idea follows naturally from the observation that many signals travel further than the average spacing between animals This is self evidently true for long range signals but at a high density the same is true for short range signals e.g. begging calls of nestling birds This book provides a current summary of research on communication networks and appraises future prospects It combines information from studies of several taxonomic groups insects to people via fiddler crabs fish frogs birds and mammals and several signalling modalities visual acoustic and chemical signals It also specifically addresses the many areas of interface between communication networks and other disciplines from the evolution of human charitable behaviour to the psychophysics of signal perception via social behaviour physiology and mathematical models

Animal Communication Networks Peter K. McGregor, 2005 This book is about how and why animals communicate It summarises research progress and prospects in the rapidly expanding topic of animal communication networks Covering several different animal groups and types of signal it also highlights research at the interface with other disciplines for example psychology and physiology

Animal Social Networks Dr. Jens Krause, Richard James, Daniel W. Franks, Darren P. Croft, 2015 The scientific study of networks computer social and biological has received an enormous amount of interest in recent years However the network approach has been applied to the field of animal behaviour relatively late compared to many other biological disciplines Understanding social network structure is of great importance for biologists since the structural characteristics of any network will affect its constituent members and influence a range of diverse behaviours These include finding and choosing a sexual partner developing and maintaining cooperative relationships and engaging in foraging and anti predator behavior This novel text provides an overview of the insights that network analysis has provided into major biological processes and how it has enhanced our understanding of the social organisation of several important taxonomic groups It brings together researchers from a wide range of disciplines with the aim of providing both an overview of the power of the network approach for understanding patterns and process in animal populations as well as outlining how current methodological constraints and challenges can be overcome Animal Social Networks is principally aimed at graduate level students and researchers in the fields of ecology zoology animal behaviour and evolutionary biology but will also be of interest to social scientists

Vibrational Communication Reginald B. Cocroft,Matija Gogala,Peggy S.M. Hill,Andreas Wessel,2014-07-25 This volume explains the key ideas questions and methods involved in studying the hidden world of vibrational communication in animals The authors dispel the notion that this form of communication is difficult to study and show how vibrational signaling is a key to social interactions in species that live in contact with a substrate whether it be a grassy lawn a rippling stream or a tropical forest canopy This ancient and widespread form of social exchange is also remarkably understudied A frontier in animal behavior it offers unparalleled opportunities for discovery and for addressing general questions in communication and social evolution In addition to reviews of advances made in the study of several animal taxa this volume also explores topics such as vibrational communication networks the interaction of acoustic and vibrational communication the history of the field the evolution of signal production and reception and establishing a common vocabulary *Science* John Michels (Journalist),1923 Vols for 1911 13 contain the Proceedings of the Helminthological Society of Washington ISSN 0018 0120
