Animal Consciousness:

A Philosophy for the Science of Animal Consciousness Walter Veit, 2023-06-16 This book attempts to advance Donald Griffin's vision of the final crowning chapter of the Darwinian revolution by developing a philosophy for the science of animal consciousness. It advocates a Darwinian bottom-up approach that treats consciousness as a complex, evolved and multidimensional phenomenon in nature rather than a mysterious, all-or-nothing property immune to the tools of science and restricted to a single species. The so-called emergence of a science of consciousness in the 1990s has at best been a science of human consciousness. This book aims to advance a true Darwinian science of consciousness in which its evolutionary origin, function and phylogenetic diversity are moved from the field's periphery to its very centre, thus enabling us to integrate consciousness into an evolutionary view of life. Accordingly, this book has two objectives: i) to argue for the need and possibility of an evolutionary bottom-up approach that addresses the problem of consciousness in terms of the evolutionary origins of a new ecological lifestyle that made consciousness worth having, and ii) to articulate a thesis and beginnings of a theory of the place of consciousness as a complex, evolved phenomenon in nature that can help us to answer the question of what it is like to be a bat, an octopus, or a crow. *A Philosophy for the Science of Animal Consciousness* will appeal to researchers and advanced students interested in advancing our understanding of animal minds, as well as anyone with a keen interest in how we can develop a science of animal consciousness.

Why Animals Matter Marian Stamp Dawkins, 2012-03-29 In a world increasingly concerned with the human species and its future, Marian Stamp Dawkins argues that we need to rethink some of the fundamental questions regarding animal welfare. How are we justified in projecting human emotions on to animals? What kind of mental lives do they have? What can science tell us about their quality of life?

When Animals Dream David M. Peña-Guzmán, 2022-06-21 A spellbinding look at the philosophical and moral implications of animal dreaming. Are humans the only dreamers on Earth? What goes on in the minds of animals when they sleep? *When Animals Dream* brings together behavioral and neuroscientific research on animal sleep with philosophical theories of dreaming. It shows that dreams provide an invaluable window into the cognitive and emotional lives of nonhuman animals, giving us access to a seemingly inaccessible realm of animal experience. David Peña-Guzmán uncovers evidence of animal dreaming throughout the scientific literature, suggesting that many animals run reality simulations while asleep, with a dream ego moving through a dynamic and coherent dreamscape. He builds a convincing case for animals as conscious beings and examines the thorny scientific, philosophical, and ethical questions it raises. Once we accept that animals dream, we incur a host of moral obligations and have no choice but to rethink our views about who animals are and the interior lives they lead. A mesmerizing journey into the otherworldly domain of nonhuman consciousness, *When Animals Dream* carries profound implications for contemporary debates about animal cognition, animal ethics, and animal rights, challenging us to regard animals as beings who matter and for whom things matter.

Animal consciousness: exploring theoretical, methodological and ethical issues Antonino Raffone

,Günter Ehret,2026-03-17 The study of animal consciousness is a burgeoning field that intersects various disciplines including psychology neuroscience ethology philosophy and ecology Despite significant advancements the understanding of consciousness in non human animals remains a complex and debated topic Current research has raised questions about the meaningfulness of the term consciousness when applied to animals the methodological challenges in studying it and the ethical implications of such research Recent studies have provided insights into the neural correlates of consciousness the contextual and task dependent nature of animal awareness and the evolutionary and ecological significance of consciousness in different species However there remains a substantial gap in comprehensively understanding how consciousness manifests across diverse animal taxa and the broader implications of these findings Addressing these gaps is crucial for advancing our knowledge and fostering ethical considerations in the study of animal consciousness This research topic aims to explore the theoretical methodological and ethical issues surrounding animal consciousness The primary objectives include examining the meaningfulness of the term consciousness in animals identifying effective methodological approaches for its study and understanding the ecological and evolutionary implications of consciousness Additionally the research will delve into the ethical considerations that arise from studying consciousness in non human animals By addressing these questions the research aims to contribute to a more nuanced and comprehensive understanding of animal consciousness To gather further insights into the complexities of animal consciousness we welcome articles addressing but not limited to the following themes

Meaningfulness of the term consciousness in animals Methodological approaches to studying consciousness in animals Contextual and task dependence of animal consciousness Ecological significance of consciousness in animal species Evolutionary implications of consciousness in social systems Potential role of consciousness as an adaptation for reproductive fitness in social systems Exploration of how consciousness may have evolved as an optimization strategy in social contexts Neural correlates of animal consciousness Sentience and self consciousness in animals Philosophical and ethical reflections linked to animal consciousness By bringing together diverse perspectives and addressing these topics this article collection aims to contribute to the ongoing dialogue on consciousness in animals and provide a platform for exciting and insightful research in this field Researchers are encouraged to submit their innovative studies that advance our understanding of animal consciousness and its implications

Animal Minds Donald R. Griffin,1992 *Animal Minds* tackles a question that is both fascinating and important The overwhelming body of evidence that Donald Griffin has assembled puts beyond reasonable doubt the case for recognizing that many non human animals are capable of much more sophisticated thinking than many scientists have been prepared to believe Peter Singer author of *Animal Liberation*

Animal Minds Donald Redfield Griffin, 2001 In *Animal Minds* Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don't communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications

The Animal Mind Kristin Andrews, 2014-10-30 The study of animal cognition raises profound questions about the minds of animals and philosophy of mind itself Aristotle argued that humans are the only animal to laugh but in recent experiments rats have also been shown to laugh In other experiments dogs have been shown to respond appropriately to over two hundred words in human language In this introduction to the philosophy of animal minds Kristin Andrews introduces and assesses the essential topics problems and debates as they cut across animal cognition and philosophy of mind She addresses the following key topics what is cognition and what is it to have a mind What questions should we ask to determine whether behaviour has a cognitive basis the science of animal minds explained ethology behaviourist psychology and cognitive ethology rationality in animals animal consciousness what does research into pain and the emotions reveal What can empirical evidence about animal behaviour tell us about philosophical theories of consciousness does animal cognition involve belief and concepts do animals have a Language of Thought animal communication other minds do animals attribute mindedness to other creatures moral reasoning and ethical behaviour in animals animal cognition and memory Extensive use of empirical examples and case studies is made throughout the book These include Cheney and Seyfarth's vervet monkey research Thorndike's cat puzzle boxes Jensen's research into humans and chimpanzees and the ultimatum game Pankseep and Burgdorf's research on rat laughter and Clayton and Emery's

research on memory in scrub jays Additional features such as chapter summaries annotated further reading and a glossary make this an indispensable introduction to those teaching philosophy of mind animal cognition It will also be an excellent resource for those in fields such as ethology biology and psychology

Who is Conscious? Marian Stamp Dawkins, 2025-10-17 Consciousness is the most fascinating but tantalizingly difficult topic in biology Although many people now believe that mammals birds and possibly all vertebrates are conscious there are also claims that many other animals such as crabs and insects may be conscious too Such claims if true would have major implications for what we eat how we control pests and for our relationship with the animal world Now more than ever it is important to question the evidence and ask what do we really know about animal consciousness Who is Conscious is an adventure into animal minds It is a guide into the conscious experiences of animals with no words to tell us what they might be thinking or feeling It proposes some simple questions to help us decide which evidence to believe It looks at recent evidence for consciousness in various animal species and asks how well it stands up to being challenged It describes research on human consciousness and asks whether we should conclude that non humans are conscious too

Human and Animal Minds Peter Carruthers, 2019 Claims about consciousness in animals are often made in support of their moral standing Peter Carruthers argues that there is no fact of the matter about animal consciousness and it is of no scientific or ethical significance Sympathy for an animal can be grounded in its mental states but should not rely on assumptions about its consciousness
