

# Animal Life Cycles Introduction

A life cycle is a series of stages that describes how a living thing develops, lives, and dies. Every animal goes through a life cycle, beginning with birth, then changing to an adult, and eventually ending with death. Each **generation** goes through these changes. When each series of stages is complete, it is called a life cycle.

## INSECTS

## BIRDS

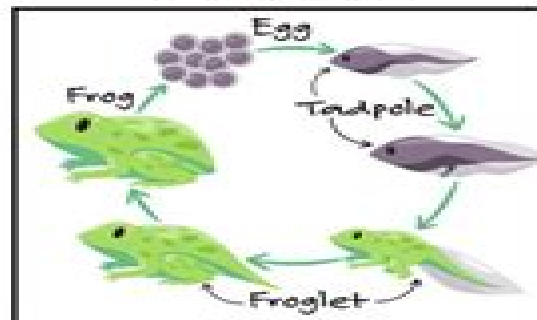

## FISH

## REPTILES

## AMPHIBIANS

## MAMMALS

Life cycles repeat over and over again. For this reason, you could also call this concept the circle of life. Seeing the pattern in a circle can help us understand that the life cycle repeats itself over and over again.

Insects and most amphibians change quite a lot throughout their life cycles. They go through a process called **metamorphosis**. Metamorphosis is a significant change in the body form of an animal during its life cycle. Sometimes there are three basic stages (called incomplete metamorphosis), but most of the time there are four (complete metamorphosis).
