Breaking The Rules:

Breaking Rules: The Social and Situational Dynamics of Young People's Urban Crime Per-Olof H. Wikström,2012-05-24 Breaking new ground in the study of crime in urban environments Breaking Rules The Social and Situational Dynamics of Young People s Urban Crimeexamines the findings theoretical basis and new methodology of The Peterborough Adolescent and Young Adult Development Study PADS This major longitudinal study investigates the role of the social environment on crime causation involving a cohort of 700 young people from the age of 12 A particular aim of PADS is to employ a new theory known as Situational Action Theory as well as the innovative methodology of ecometrics combined with space time budgets to improve the study of young people s offending and its changes By reviewing the current literature and analysing the theoretical and methodological problems of previous research the book explains how Situational Action Theory can help overcome central problems in criminological theorising Using this new and innovative framework it presents an analysis of the urban structure of Peterborough and its correlation to the differences in social life found in that area The variations in the urban environment are examined in terms of crime victimization and fear of crime and a detailed examination of young persons crime and its spatial patterns is offered through the unique space time budget data collected within PADS that enables analyses of young people their movements and crime involvement With implications for policy and prevention as well as being the first study of its kind this book should be of great interest to policy makers and practitioners interested in issues of urban environments as well as those studying crime in the urban environment and the role of the social environment in crime causation **Rules of Play** Katie Salen Tekinbas,Eric Zimmerman,2003-09-25 An impassioned look at games and game design that offers the most ambitious framework for understanding them to date As pop culture games are as important as film or television but game design has yet to develop a theoretical framework or critical vocabulary In Rules of Play Katie Salen and Eric Zimmerman present a much needed primer for this emerging field They offer a unified model for looking at all kinds of games from board games and sports to computer and video games As active participants in game culture the authors have written Rules of Play as a catalyst for innovation filled with new concepts strategies and methodologies for creating and understanding games Building an aesthetics of interactive systems Salen and Zimmerman define core concepts like play design and interactivity They look at games through a series of eighteen game design schemas or conceptual frameworks including games as systems of emergence and information as contexts for social play as a storytelling medium and as sites of cultural resistance Written for game scholars game developers and interactive designers Rules of Play is a textbook reference book and theoretical guide It is the first comprehensive attempt to establish a solid theoretical framework for the emerging discipline of game design *Algorithmic aspects of resource allocation and multiwinner voting: theory and experiments* Kaczmarczyk, Andrzej,2021-12-10 This thesis is concerned with investigating elements of computational social choice in the light of real world applications We contribute to a better understanding of the

areas of fair allocation and multiwinner voting For both areas inspired by real world scenarios we propose several new notions and extensions of existing models Then we analyze the complexity of answering the computational questions raised by the introduced concepts To this end we look through the lens of parameterized complexity We identify different parameters which describe natural features specific to the computational problems we investigate Exploiting the parameters we successfully develop efficient algorithms for spe cific cases of the studied problems We complement our analysis by showing which parameters presumably cannot be utilized for seeking efficient algorithms Thereby we provide comprehensive pictures of the computational complexity of the studied problems Specifically we concentrate on four topics that we present below grouped by our two areas of interest For all but one topic we present experimental studies based on implementations of newly developed algorithms We first focus on fair allocation of indivisible resources In this setting we consider a collection of indivisible resources and a group of agents Each agent reports its utility evaluation of every resource and the task is to fairly allocate the resources such that each resource is allocated to at most one agent We concentrate on the two following issues regarding this scenario The social context in fair allocation of indivisible resources In many fair allocation settings it is unlikely that every agent knows all other agents For example consider a scenario where the agents represent employees of a large corporation It is highly unlikely that every employee knows every other employee Motivated by such settings we come up with a new model of graph envy freeness by adapting the classical envy freeness notion to account for social relations of agents modeled as social networks We show that if the given social network of agents is simple for example if it is a directed acyclic graph then indeed we can sometimes find fair allocations efficiently However we contrast tractability results with showing NP hardness for several cases including those in which the given social network has a constant degree Fair allocations among few agents with bounded rationality Bounded rationality is the idea that humans due to cognitive limitations tend to simplify problems that they face One of its emanations is that human agents usually tend to report simple utilities over the resources that they want to allocate for example agents may categorize the available resources only into two groups of desirable and undesirable ones Applying techniques for solving integer linear programs we show that exploiting bounded rationality leads to efficient algorithms for finding envy free and Pareto efficient allocations assuming a small number of agents Further we demonstrate that our result actually forms a framework that can be applied to a number of different fairness concepts like envy freeness up to one good or envy freeness up to any good This way we obtain efficient algorithms for a number of fair allocation problems assuming few agents with bounded rationality We also empirically show that our technique is applicable in practice Further we study multiwinner voting where we are given a collection of voters and their preferences over a set of candidates The outcome of a multiwinner voting rule is a group or a set of groups in case of ties of candidates that reflect the voters preferences best according to some objective In this context we investigate the following themes The robustness of election outcomes We study how robust outcomes of multiwinner elections are against

possible mistakes made by voters Assuming that each voter casts a ballot in a form of a ranking of candidates we represent a mistake by a swap of adjacent candidates in a ballot We find that for rules such as SNTV k Approval and k Borda it is computationally easy to find the minimum number of swaps resulting in a change of an outcome This task is however NP hard for STV and the Chamberlin Courant rule We conclude our study of robustness with experimentally studying the average number of random swaps leading to a change of an outcome for several rules Strategic voting in multiwinner elections We ask whether a given group of cooperating voters can manipulate an election outcome in a favorable way We focus on the k Approval voting rule and we show that the computational complexity of answering the posed question has a rich structure We spot several cases for which our problem is polynomial time solvable However we also identify NP hard cases For several of them we show how to circumvent the hardness by fixed parameter tractability We also present experimental studies indicating that our algorithms are applicable in practice Diese Arbeit befasst sich mit der Untersuchung von Themen des Forschungsgebiets Computational Social Choice im Lichte realer Anwendungen Dabei tr gt sie zu einem besseren Verst ndnis der Bereiche der fairen Zuordnung und der Mehrgewinnerwahlen bei F r beide Konzepte schlagen wir inspiriert von realen Anwendungen verschiedene neue Begriffe und Erweiterungen bestehender Modelle vor Anschlie end analysieren wir die Komplexit t der Beantwortung von Berechnungsfragen die durch die eingef hrten Konzepte aufgeworfen werden Dabei fokussieren wir uns auf die parametrisierte Komplexit t Hierzu identifizieren wir verschiedene Parameter welche nat rliche Merkmale der von uns untersuchten Berechnungsprobleme beschreiben Durch die Nutzung dieser Parameter entwickeln wir erfolgreich effiziente Algorithmen f r Spezialf lle der untersuchten Probleme Wir erg nzen unsere Analyse indem wir zeigen welche Parameter vermutlich nicht verwendet werden k nnen um effiziente Algorithmen zu finden Dabei zeichnen wir ein umfassendes Bild der Berechnungskomplexit t der untersuchten Probleme Insbesondere konzentrieren wir uns auf vier Themen die wir gruppiert nach unseren beiden Schwerpunkten unten vorstellen F r alle Themen bis auf eines pr sentieren wir Experimente die auf Implementierungen der von uns neu entwickelten Algorithmen basieren Wir konzentrieren uns zun chst auf die faire Zuordnung unteilbarer Ressourcen Hier betrachten wir eine Menge unteilbarer Ressourcen und eine Gruppe von Agenten Jeder Agent gibt eine Bewertung des Nutzens jeder Ressource ab und die Aufgabe besteht darin eine faire Zuordnung der Ressourcen zu finden wobei jede Ressource h chstens einem Agenten zugeordnet werden kann Innerhalb dieses Bereiches konzentrieren wir uns auf die beiden folgenden Problemstellungen Der soziale Kontext bei der fairen Zuordnung unteilbarer Ressourcen In vielen Szenarien in denen Ressourcen zugeordnet werden sollen ist es unwahrscheinlich dass jeder Agent alle anderen kennt Vorstellbar ist beispielsweise ein Szenario in dem die Agenten Mitarbeiter eines gro en Unternehmens repr sentieren Es ist h chst unwahrscheinlich dass jeder Mitarbeiter jeden anderen Mitarbeiter kennt Motiviert durch solche Szenarien entwickeln wir ein neues Modell der graph basierten Neidfreiheit Wir erweitern den klassischen Neidfreiheitsbegriff um die sozialen Beziehungen von Agenten die durch soziale

Netzwerke modelliert werden Einerseits zeigen wir dass wenn das soziale Netzwerk der Agenten einfach ist zum Beispiel wenn es sich um einen gerichteten azyklischen Graph handelt in manchen F llen faire Zuordnungen effizient gefunden werden k nnen Andererseits stellen wir diesen algorithmisch positiven Ergebnissen mehrere NP schweren F llen entgegen Ein Beispiel f r einen solchen Fall sind soziale Netzwerke mit einem konstanten Knotengrad Faire Zuteilung an wenige Agenten mit begrenzter Rationalit t Begrenzte Rationalit t beschreibt die Idee dass Menschen aufgrund kognitiver Grenzen dazu neigen Probleme mit denen sie konfrontiert werden zu vereinfachen Eine m gliche Folge dieser Grenzen ist dass menschliche Agenten in der Regel einfache Bewertungen der gew nschten Ressourcen abgeben beispielsweise k nnten Agenten die verf gbaren Ressourcen nur in zwei Gruppen erw nschte und unerw nschte Ressourcen kategorisieren Durch Anwendung von Techniken zum L sen von Ganzzahligen Linearen Programmen zeigen wir dass unter der Annahme einer kleinen Anzahl von Agenten die Ausnutzung begrenzter Rationalit t dabei hilft effiziente Algorithmen zum Finden neidfreier und Pareto effizienter Zuweisungen zu entwickeln Weiterhin zeigen wir dass unser Ergebnis ein allgemeines Verfahren liefert welches auf eine Reihe verschiedener Fairnesskonzepte angewendet werden kann wie zum Beispiel Neidfreiheit bis auf ein Gut oder Neidfreiheit bis auf irgendein Gut Auf diese Weise gewinnen wir effiziente Algorithmen f r eine Reihe fairer Zuordnungsprobleme wenige Agenten mit begrenzter Rationalit t vorausgesetzt Dar ber hinaus zeigen wir empirisch dass unsere Technik in der Praxis anwendbar ist Weiterhin untersuchen wir Mehrgewinnerwahlen bei denen uns eine Menge von W hlern sowie ihre Pr ferenzen ber eine Reihe von Kandidaten gegeben sind Das Ergebnis eines Mehrgewinnerwahlverfahrens ist eine Gruppe oder eine Menge von Gruppen im Falle eines Unentschiedens von Kandidaten welche die Pr ferenzen der W hler am besten einem bestimmten Ziel folgend widerspiegeln In diesem Kontext untersuchen wir die folgenden Themen Die Robustheit von Wahlergebnissen Wir untersuchen wie robust die Ergebnisse von Mehrgewinnerwahlen gegen ber m glicher Fehler der W hler sind Unter der Annahme dass jeder W hler eine Stimme in Form einer Rangliste von Kandidaten abgibt modellieren wir einen Fehler als einen Tausch benachbarter Kandidaten in der Rangliste Wir zeigen dass f r Wahlregeln wie SNTV k Approval und k Borda die minimale Anzahl an Vertauschungen welche zu einer Ergebnis nderung f hrt einfach zu berechnen ist F r STV und die Chamberlin Courant Regel ist diese Aufgabe allerdings NP schwer Wir schlie en unsere Untersuchung der Robustheit unterschiedlicher Wahlregeln ab mit einer experimentellen Evaluierung der durchschnittlichen Anzahl zuf lliger Vertauschungen die zu einer nderung des Ergebnisses f hren Strategische Abstimmung bei Wahlen mit mehreren Gewinnern Wir fragen ob eine bestimmte Gruppe von kooperierenden W hlern ein Wahlergebnis zu ihren Gunsten manipulieren kann Dabei konzentrieren wir uns auf die k Approval Wahlregel Wir zeigen dass die Berechnungskomplexit t der besagten Manipulation eine reiche Struktur besitzt Auf der einen Seite identifizieren wir mehrere F lle in denen das Problem in Polynomzeit l sbar ist Auf der anderen Seite identifizieren wir jedoch auch NP schwere F lle F r einige von ihnen zeigen wir wie die Berechnungsschwere durch

parametrisierte Algorithmen umgangen werden kann Wir pr sentieren zudem experimentelle Untersuchungen welche darauf hindeuten dass unsere Algorithmen in der Praxis anwendbar sind *The New Statesman* ,1914 *Unicode Explained* Jukka K.
