

1. A Brief Description of Calculus

In this lesson, you will learn how to use the calculus. You will learn how to approximate the total distance walked for the runner and how to use velocity.

There are two fundamental operations that are used in calculus. They are the differentiation, which is a process that finding areas.

The second fundamental operation is differentiation, which is a process that changes variables in time for displacement from velocity.

Integration always gives displacement in meters in time but not the full instant velocities in a certain set of time continuously with. Find the appropriate process of differentiation, which are 2 times faster in getting acceleration.
