Hogan, 2017-11-02 Behavior studies now span a variety of sub disciplines including behavioral ecology neuroscience cognitive psychology and evolutionary developmental biology While the fields rapid growth has led to startling new insights into animal behavior it has brought increasingly fragmented approaches to the subject Integrating ideas and findings from a range of disciplines this book provides a common framework for understanding diverse issues in behavior studies The framework is derived from classical ethology incorporating concepts and data from research in experimental psychology neurophysiology and evolutionary biology Hogan outlines the origin and

development of major ideas and issues in the field drawing on examples throughout to highlight connections across sub disciplines Demonstrating how results in one area can directly inform work in others the book ultimately proposes concepts to facilitate new discussions that will open the way for improved dialog between researchers across behavior studies

Animal Behavior Lee C. Drickamer, Stephen H. Vessey, Elizabeth M. Jakob, 2010 *An Introduction to Ethorobotics* Judit Abdai, Adam Miklosi, 2024-09-27 This pioneering text explores the emerging discipline of ethorobotics which brings together the fields of animal behaviour and robotics It encourages closer collaboration between behavioural scientists and engineers to facilitate the creation of robots with a higher degree of functionality in animal human environments and to broaden understanding of animal behaviour in new and intriguing ways Utilising the knowledge of key ethologists and roboticists in the field today this book is divided into four major parts The first part is written for those with little or no background in the biology of animal behaviour particularly for those coming from an engineering background seeking an accessible introduction to the field and how it can be applied to robotic behaviour Topics include problem solving in animals social cognition and communication visual acoustic olfactory etc The second part is an introduction to the basic construction of robots for non engineers and the possibilities offered by current technical achievements and their limitations to the study of animal behaviour The third part explores the core theme of ethorobotics the basic framework of the discipline the field s evolution and current topics including ethical considerations autonomy to living social robots The fourth and final chapter looks at ethorobotics in practice through key research projects which have had the biggest impact This is a ground breaking interdisciplinary text which will appeal to upper level undergraduates postgraduates and researchers focusing on animal behaviour and cognition as well as those undertaking courses in engineering social robotics biologically inspired robotics AI and human robot and animal robot interactions *Animal Behavior: Mechanisms, Ecology, Evolution* Lee C. Drickamer, Stephen H. Vessey, Elizabeth Jakob, 2001-07-17 Designed for a one semester introductory course in Animal Behavior Animal behavior is a broad discipline with investigators and contributions from diverse perspectives including anthropology comparative psychology ecology ethology physiology and zoology The authors goal in this textbook is to use evolutionary principles as a unifying theme to provide students exposure to a number of approaches to the field of animal behavior They also demonstrate that the varied perspectives used to study behavior are complementary and often integrated they are not mutually exclusive The subtitle Mechanisms Ecology and Evolution reflects the broad themes that dominate the book **The Ethology of Domestic Animals** Per Jensen, 2017-09-27 Completely updated revised and redesigned in colour throughout this classic bestselling text continues to provide a concise introduction to the important fundamentals of animal behaviour from genetics physiology motivation learning and cognition through to social and reproductive behaviour abnormal behaviour and human animal interactions This text remains a highly respected essential resource for both students and lecturers in animal and veterinary science animal welfare zoology and psychology **The Domestic Dog** James

Serpell,2017 Second edition of a classic text on canine science and behavior incorporating two decades of new evidence and discoveries

Feeding in Domestic Vertebrates V. L. Bels,2006 Domestication of vertebrates is based on the understanding of the needs of animals in their natural environment Thus the success of this domestication throughout human history is largely dependant of the knowledge of the animal feeding behaviour The aim of this volume is to provide advanced students and researchers with a review of current knowledge of feeding in domestic mammals and birds The book also presents chapters on feeding behaviour in particular species the scope is wide covering not only ruminants poultry and pigs but also more specifically horses rabbits and ostrich Contributors include leading research workers from Europe USA Australia and South Africa

Encyclopedia of Animal Behavior: R-Z Marc Bekoff,2004 Entries examine a broad array of different species and behavior patterns using techniques that range from molecular approaches to the study of behavior to analyses of individuals populations species and ecosystems

Advances in the Study of Behavior H. Jane Brockmann,Timothy J. Roper,Marc Naguib,Katherine E. Wynne-Edwards,Chris Barnard,John Mitani,2011-07-29 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields This volume reflects many of the current themes in animal behavior including the evolution of social behavior sexual selection and communication It also reflects controversial topics on which the authors provide interesting new insights Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onwards

Animal Behavior Lee C. Drickamer,Stephen H. Vessey,Doug Meikle,1996

Animal Behavior Mark Ridley,2009-07-01 This classic textbook is a concise introductory guide to the subject of animal behavior The book is organized by first building the four cornered foundations of the subject then moving higher In an extremely well organized progression the student is lead to an understanding of the essential topics explained in logical self contained units Each chapter ends with suggestions for further reading In this second edition the coverage of mechanisms of behavior is much expanded as is the material on evolution and natural selection The chapter on development includes much of the new work on learning and memory especially song learning in birds Indeed throughout the book examples are drawn from recent ground breaking research The latest edition of the textbook of choice in animal behaviourExtremely well illustrated and including many classic photos by Niko TinbergenUniquely well suited as an introductory text designed for student use with a clear and logical organization founded on self contained units

Animal Behavior Ken Yasukawa,2014-01-22 Discover why animals do what they do based on their genes physiologies cultures traditions survival and mating advantages and evolutionary histories and find out how studying behavior in the animal world helps us understand human behavior The three volumes of Animal Behavior How and Why Animals Do the Things They Do cover the breadth of the field addressing causation development function and evolution in a

wide range of animals from invertebrates to humans Inspired by Nobel laureate Nikolaas Tinbergen s work the first two volumes follow Tinbergen s four classic questions of animal behavior while the third volume supplies integrated examples of Tinbergen s investigative process applied in specific cases Written in an engaging accessible manner ideal for college students as well as general audiences this evidence based collection provides a fascinating tour of animal behaviorists findings such as how animal communication can be truthful or deceitful the deadly serious business behind clashes in the battle of the sexes and how documentation of animal behavior can lead to a deeper understanding of human behavior Each chapter provides both historical background and information about current developments in animal behavior knowledge

Behaviour and Evolution Marion Hall, Tim Halliday, 1998-11-25 This volume examines a variety of aspects of animal behavior and analyzes the underlying relationship between behavior and evolution Studying behavior draws upon the work of scientists from a number of disciplines all seeking to answer the question of why an animal behaves in the way it does The possible answers to this question development survival value evolutionary history and cause and effect are explored in this easy to read introduction to behavior and evolution Canadian Journal of Experimental Psychology, 2004 **Animal**

Behaviour C. J. Barnard, 2012-12-06 The study of animal behaviour particularly from evolutionary and ecological viewpoints has been one of the major growing points in biology over the last 10 to 15 years The degree of quantitative rigour in theoretical observational and experimental approaches to behaviour has increased dramatically As more of the rapidly growing research literature becomes a basic requirement for students reading animal behaviour at undergraduate level there is a need for a readily comprehensible text covering all major aspects of behaviour study to accompany their courses This book based on my first second and third year undergraduate lectures at the University of Nottingham is designed to meet that requirement The book begins with a discussion of the physiological and anatomical bases of behaviour the relationship between nervous system structure and function and behavioural hormonal effects on behaviour biological clocks perceptual mechanisms and stimulus filtering This leads to a consideration in Chapter 2 of how the animal integrates internal and external stimuli in making decisions about its behaviour and the way natural selection has shaped decision making processes and the organisation of motivation The first two chapters therefore deal with the instigation or causation of behaviour within the animal Chapters 3 and 4 deal with developmental aspects of behaviour Chapter 3 discusses behaviour genetics including the relationship between specific genes and behaviour the heritability of behaviour patterns the site of gene action in the body and the evolutionary consequences of a genetic basis to behaviour
