Climate And Environmental Database Systems:

Climate and Environmental Database Systems Michael Lautenschlager, Manfred Reinke, 2012-12-06 Climate and Environmental Database Systems contains the papers presented at the Second International Workshop on Climate and Environmental Database Systems held November 21-23 1995 in Hamburg Germany Climate and environmental data may be separated into two classes large amounts of well structured data and smaller amounts of less structured data The large amounts are produced by numerical climate models and by satellites handling data in the order of magnitude of 100 Tbytes for the climate modelling sites and 1000 Tbytes for the recording and processing of satellite data Smaller amounts of poorly structured data are the environmental data which come mainly from observations and measurements Present day problems in data management are connected with a variety of data types Climate and Environmental Database Systems addresses the state of the art practical experience and future perspectives for climate and environmental database systems and may be used as a text for a graduate level course on the subject or as a reference for researchers or practitioners in industry

Environmental Data Management Nilgun B. Harmanciogamalu, V.P. Singh, M.N. Alpaslan, 2013-06-29 The diverse nature of environmental problems mankind has encountered within the last decade has developed a new understanding of the nature of environmental processes Currently the environment is considered as a continuum of air soil and water as the vital components for sustaining life on earth The interactive nature of these components requires that the environment is managed and protected as a cohesive whole This can only be accomplished through an integrated approach to environmental management Besides the concept of environmental continuum prospects for sustainable development of natural resources and the recent recognition of global climate change impacts have also necessitated such an integrated approach to environmental management Two basic tools for integrated management of the environment are modeling and environmental data Both tools were available and valid in the past however the recent requirements for integrated environmental management have also led to a significant evolution of both modeling procedures and data management systems

Integrated Approach to Environmental Data Management Systems Nilgun Harmancioglu, 1997 An integrated approach to environmental data management is necessitated by the complexity of the environmental problems that need to be addressed coupled with the interdisciplinary approach that needs to be adopted to solve them Agenda 21 of the Rio Environmental Conference mandated international programmes and organizations to take steps to develop common data and information management plans and steps have been taken in this direction
