Clinical Information Systems A Component Based Approach:

Clinical Information Systems Rudi Van de Velde, Patrice Degoulet, 2006-04-06 Hospital information systems HIS have become integral tools in the management of a hospital's medical and administrative information. With illustrated case studies, this book emphasizes clinical information systems (CIS) and their use in the direct management of the patient. Topics include the medical record, security, resource management, and imaging integration. *Analysis, Design and Implementation of Secure and Interoperable Distributed Health Information Systems* Bernd Blobel, B. Blobel, 2002 This book is an introduction into methodology and practice of analysis, design, and implementation of distributed health information systems. Special attention is dedicated to security and interoperability of such systems, as well as to advanced electronic health record approaches. In the book, both available architectures and implementations, but also current and future innovations, are considered. Therefore, the component paradigm, UML, XML, eHealth, are discussed in a concise way. Many practical solutions, specified and implemented first in the author's environment, are presented in greater detail. The book addresses information scientists, administrators, health professionals, managers, and other users of health information systems. *The New Navigators* Robert Baud, 2003 The extensive use of the web by patients and laymen for health information challenges us to build information services that are easily accessible and trustworthy. The evolution towards a semantic web is addressed, and papers covering all the fields of biomedical informatics are also included. *Ed Engineering the System of Healthcare Delivery* William B. Rouse, Denis A. Cortese, 2010 As the United States continues to debate reform of its healthcare system, this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access, affordability, and quality. The US healthcare system has many excellent components: strong scientific input, extraordinary technology for diagnosis and treatment, dedicated staff, and top class facilities among them. But the system has evolved haphazardly over time, and although it has not failed entirely, the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole, it can never hope to succeed. Above all, they point out that the US system does not provide high value healthcare; it has the highest costs in the world, and yet many other countries have lower infant mortality rates and better life expectancy. Together with a team of highly regarded thought leaders, the authors of this publication advocate a complete rethinking of healthcare from a systems perspective: an engineering approach to healthcare, and they then describe how to set about it. Covering a wide range of subjects, including health care costs and economics, barriers to change, integrated health systems, electronic records, and computer-based patient support, as well as patient safety and palliative and chronic care, this book will be of interest to all those involved in healthcare provision whose goal is affordable care to promote healthy, high quality lives. *Medinfo* Marius Fieschi, Enrico Coiera, Yu-Chan Jack Li, 2004 A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day, given

available medical knowledge and resources In order to provide the most effective healthcare possible the activities of teams of health professionals have to be coordinated through well designed processes centered on the needs of patients For information systems to be accepted and used in such an environment they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient Developing innovative approaches to design and build evidence based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities

Medical Informatics, e-Health Alain Venot, Anita Burgun, Catherine Quantin, 2013-09-02 Over the years medical informatics has matured into a true scientific discipline Fundamental and applied aspects are now taught in various fields of health including medicine dentistry pharmacy nursing and public health Medical informatics is also often included in the curricula of many other disciplines including the life sciences engineering and economics Medical informatics is a complex and rapidly changing discipline Relatively few books have been published on the subject and they rapidly become obsolete This book is the fruit of a collaborative effort between authors teaching medical informatics in France and others who are conducting research in this field In addition an international perspective was pursued as reflected in the inclusion of various developments and actions in both the USA and Europe This book is divided into 18 chapters all of which include learning objectives recommendations for further reading exercises and bibliographic references

Managing Healthcare Transformation Towards P5 Medicine Bernd G.M.E Blobel, Dipak Kalra, 2023-09-29 Health and social care systems around the world are facing radical organizational methodological and technological paradigm changes to meet the requirements for improving quality and safety of care as well as efficiency and efficacy of care processes In this they re trying to manage the challenges of ongoing demographic changes towards aging multi diseased societies development of human resources a health and social services consumerism medical and biomedical progress and exploding costs for health related R D as well as health services delivery Furthermore they intend to achieve sustainability of global health systems by transforming them towards intelligent adaptive and proactive systems focusing on health and wellness with optimized quality and safety outcomes
