Climate Architecture:

Modern Architecture and Climate Daniel A. Barber, 2023-04-11 How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate mediating strategies into their designs and shows how regional approaches to climate adaptability were essential to the development of modern architecture Focusing on the period surrounding World War II before fossil fuel powered air conditioning became widely available Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design materials and shading systems as means of interior climate control He looks at projects by well known architects such as Richard Neutra Le Corbusier Lcio Costa Mies van der Rohe and Skidmore Owings and Merrill and the work of climate focused architects such as MMM Roberto Olgyay and Olgyay and Cliff May Drawing on the editorial projects of James Marston Fitch Elizabeth Gordon and others he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge alongside the work of meteorologists physicists engineers and social scientists Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design Extensively illustrated with archival material Modern Architecture and Climate provides global perspectives on modern architecture and its evolving relationship with a changing climate showcasing designs from Latin America Europe the United States the Middle East and Africa This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever increasing carbon emissions from the mechanical cooling systems of buildings and offers a historical foundation for today s zero carbon design

Cool Architecture The Images Publishing Group, 2003 Introduces a range of international architectural projects from residential and municipal to commercial and industrial each designed to withstand cold climate conditions including sub zero temperatures freeze thaw cycles heavy snowfalls and the long dark days of arctic winters

Post-Kyoto International Climate Policy Joseph E. Aldy, Robert N. Stavins, 2009-12-03 The Harvard Project on International Climate Agreements is a global multi disciplinary effort intended to help identify the key design elements of a scientifically sound economically rational and politically pragmatic post 2012 international policy architecture for addressing the threat of climate change It has commissioned leading scholars to examine a uniquely wide range of core issues that must be addressed if the world is to reach an effective agreement on a successor regime to the Kyoto Protocol The purpose of the project is not to become an advocate for any single policy but to present the best possible information and analysis on the full range of options concerning mitigation adaptation technology and finance The detailed findings of the Harvard Project are reported in this volume which contains twenty seven specially commissioned chapters A companion volume summarizing the main findings of this research is published separately as *Post Kyoto International Climate Policy Summary for Policymakers*

Italian Imprints on Twentieth-Century Architecture Denise Costanzo, Andrew Leach, 2022-05-19 Italian architecture has long exerted a special influence on the evolution of architectural ideas elsewhere from the Beaux Arts academy s

eneration of Rome to modernist and postmodern interest in Renaissance proportion Baroque space and Mannerist ambiguity This book critically examines this enduring phenomenon exploring the privileged position of Italian architects architecture and cities in the architectural culture of the past century Questioning the deep rooted myth of Italy within architectural history the book presents case studies of Italy s powerful yet problematic position in 20th century architectural ideologies at a time when established Eurocentric narratives are rightly being challenged It reconciles the privileged position of Italian architecture and design with the imperative to write history across a more global diverse heterogenous cultural geography Twenty chapters from distinguished international scholars cover subjects and architects ranging from Alberti to Gio Ponti Aldo Rossi Manfredo Tafuri Vittorio Gregotti cities from Rome and Venice to Milan and an array of international architects movements and architectural ideas influenced by Italy The chapters each question where how and why the disciplinary edifice of 20th century architecture its canon of built visual textual and conceptual works relied on Italian foundations examining where and how those foundations have become insecure Indispensable for students and scholars of both Italian and global architectural history Italian Imprints on Twentieth Century Architecture provides an opportunity to consider the architectural and urban landscape of Italy from substantially new points of view **The American Architect** ,1914

American Architect and the Architectural Review ,1891 **Symbiotic Intelligence** Hua Chai,Ding Wen Nic Bao,Zhe Guo,Philip F. Yuan,2025-05-03 This open access book is a compilation of selected papers from The 6th International Conference on Computational Design and Robotic Fabrication CDRF 2024 The work focuses on novel techniques for computational design and robotic fabrication The contents make valuable contributions to academic researchers designers and engineers in the industry Also readers will encounter new ideas about understanding symbiotic intelligence in architecture **City, Climate, and Architecture** Sascha Roesler,2022-06-21 The publication rethinks climate control a key concern of the discipline of architecture through the lens of city climate phenomena over the course of the 20th century

Based on a history of climate control on urban scales it promotes the integration of indoors and outdoors in order to reduce environmental and thermal loads in cities Just as heating and cooling practices inside the buildings are affecting the urban climate outdoors urban heat islands are influencing the energy requirements and thermal conditions inside the buildings While the first part of the book focuses on the interwar period in Europe the publication s second part considers examples from all over the globe tracing the growing significance of ecological thinking for the design of urban environments

Architecture John Soane,1929 **Architecture as the Ethics of Climate** Jin Baek,2016-06-10 At a time when climate and ethics have become so important to architectural debate this book proposes an entirely new way for architects to engage with these core issues Drawing on Tetsuro Watsuji s 1889 1960 philosophy the book illuminates climate not as a collection of objective natural phenomena but as a concrete form of bond in which who we are the subjective human experience is indivisibly intertwined with the natural phenomena The book further elucidates the inter personal nature of climatic experiences criticizing a view that sees atmospheric effects of climate under the guise of personal experientialism and reinforcing the linkage between climate and ethos as the appropriateness of a setting for human affairs This ethical premise of climate stretches the horizon of sustainability as pertaining not only to man s solitary relationship with natural phenomena a predominant trend in contemporary discourse of sustainability but also to man s relationship with man Overcoming climatic determinism regional determinism too and expanding the ethics of the inter personal to the level where the whole and particulars are joined through the dialectics of the mutually negating opposites Jin Baek develops a new thesis engaging with the very urgent issues inherent in sustainable architecture Crucially the book explores examples that join climate and the dynamics of the inter personal including Japanese vernacular residential architecture the white residential architecture of Richard Neutra contemporary architectural works and urban artifacts by Tadao Ando and Aldo Rossi Beautifully illustrated this book is an important contribution to the discourse which surrounds architecture climate and ethics and encourages the reader to think more broadly about how to respond to the current challenges facing the profession **Climate Responsive Design** Richard Hyde,2013-10-08 Climate Responsive Design provides a unique source for students and practising architects requiring guidance on climatic design Covering theory and application it provides examples of innovative and best practice in responsive architecture through case studies The book also covers the broader topic of technology as a generator in design which will be of interest to all those involved in design and building The book focuses on tropical climate but some of the theory can be applied to other climates the difference in application is clearly delineated The National Builder ,1922
