**Developing Countries** Nijavalli H. Ravindranath, Jayant A. Sathaye, 2002-07-31 Among global environmental issues climate change has received the largest attention of national and global policy makers researchers industry multilateral banks and NGOs Climate change is one of the most important global environmental problems with unique characteristics It is global

long term up to several centuries and involves complex interactions between climatic environmental economic political institutional and technological pressures It is of great significance to developing countries as all the available knowledge suggests that they and particularly their poorer inhabitants are highly vulnerable to climate impacts The projected warming of 1.4 to 5.8 C by 2100 and the related changes in rainfall pattern rise in sea level and increased frequency of extreme events such as drought hurricanes and storms are likely to threaten food security increase fresh water scarcity lead to decline in biodiversity increase occurrence of vector borne diseases cause flooding of coastal settlements etc Recognizing the potential threat of severe disruptions the United Nations Conference on Environment and Development was organized in 1992 in Rio de Janeiro Brazil to begin to address ways to reduce these impacts which led to the formulation of the UN Framework Convention on Climate Change This Convention and the subsequent Kyoto Protocol recognize the common but differentiated responsibility of developing and industrialized countries in addressing climate change Developing countries thus have a unique role to play in formulating a sound reasoned and well informed response to the threat of climate change

**Adaptation** María del Pilar Bueno Rubial, Linda Siegele, 2020-04-23 This book discusses the history of the Group of 77 and China's negotiating position on adaptation to climate change in the context of the United Nations Framework Convention on Climate Change UNFCCC. It also addresses a number of questions that have arisen such as: What was the process for constructing a collective position of the G77 and China on adaptation? Why is it worthwhile to negotiate in a group of such dimensions? What are the incentives for reaching the broadest common position on adaptation? What is the role of the leading coordinators and how is this linked to the rotating annual Presidency of the G77 and China? And how do the subgroups of the G77 participate in reaching this general position? Written by former and current adaptation negotiators from developing countries, the book offers various perspectives from the subgroups and leading coordinators of the G77 and China as well as other organizations. Furthermore, in contrast to previous analyses on climate change negotiations which focus mainly on the behaviour or position of one group, it presents a unique approach based on the strength of collectivism in the G77 and China. The book appeals to practitioners and professionals as well as scientists in climate change management and policy impacts and adaptation, international relations as well as diplomacy and development.

**Global Economic Prospects and the Developing Countries** World Bank, 1997 Abstract This 1997 report projects an increase in the growth rate of global input. The improvement is likely to be especially notable for Sub-Saharan Africa which grew at around 4 percent in 1995 and 1996 and for the developing countries of Europe and Central Asia. Although the East Asian countries will have difficulty maintaining the extremely rapid pace of growth that they have enjoyed in the past decade, they are likely to continue to grow strongly. This year's report focuses on the implications of three important changes in the world economy for developing countries: 1. Five large developing and transition economies (China, India, Indonesia, Brazil, and Russia) are likely to emerge as key players in the world economy over the next quarter century. This will not only create new opportunities for trade and investment but will also require significant adjustments in international patterns of specialization for both industrial and developing countries. 2. The expansion of global production networks by multinational enterprises opens new avenues for acquiring international know-how and participating in the gains from international trade. 3. Globalization is also posing broad and more complex policy challenges for governments, especially the proper handling of the costs of adjustment associated with trade liberalization. The report also contains global economic indicators, technical notes, and classification of economies.
