Aggregate Tests

Related to Performance of Portland Cement Concrete Pavement Richard C. Meininger, National Cooperative Highway

Research Program, 1998 **Comparative Analysis of Coarse Surfacing Aggregate Using Micro-Deval, L.A. Abrasion**

and Sodium Sulfate Soundness Tests Eli Cuelho, Robert Mokwa, Keely Obert, 2007 Aggregates used in the construction of

roads must be durable abrasion resistant and freeze thaw resistant in order to perform well in pavement or as base course

The objective of this study was to investigate whether the Micro Deval test will provide better timelier and more repeatable

information about the quality of an aggregate than the Sodium Sulfate Soundness test This objective was met by 1

conducting a thorough literature review 2 testing a variety of soils from across Montana and 3 analyzing these results to

reveal potential trends The literature review indicated that the Micro Deval test has good repeatability characteristics and

that it correlates well to field performance Laboratory tests Micro Deval L A Abrasion and Sodium Sulfate were conducted on

a variety of soil types to examine the repeatability of each test method and to examine how well the methods correlate with

each other in terms of predicting aggregate durability and degradation Test results were normalized to facilitate direct

comparisons between the three methods Linear regression of the data points and corresponding confidence intervals were plotted to qualitatively assess agreement or disagreement between test methods The authors concluded that the Micro Deval test is a suitable replacement for the Sodium Sulfate test as the primary method for evaluating aggregate durability with limitations Because there were some inconsistent durability determinations between test methodologies the authors recommend that the Micro Deval test results be further supported by a second aggregate durability test whenever the Micro Deval results fall between the cutoff value and plus 30 percent of the cutoff value In other words when the Micro Deval test result for an aggregate is between 18 and 24 percent loss a second test using an alternate method is recommended before any conclusions are made regarding the durability or quality of an aggregate

Summary of Progress - National Cooperative Highway Research Program National Cooperative Highway Research Program,2000

Literature Review for Long-term Research on Bituminous Coarse Aggregate ,2001 Two key areas are addressed in this review 1 a review and upgrade of the Aggregate Quality Monitoring Program AQMP and 2 a review and upgrade of the proposed Surface Aggregate Classification System The assessment of the AQMP includes evaluation of other tests that might be required as replacements and or supplements for the tests currently used to monitor quality The study also includes an assessment of the frequency and protocol of testing and suggests changes where necessary
