An Environmental History of the Middle Ages John Aberth, 2013 The Middle Ages was a critical and formative time for Western approaches to our natural surroundings eeAn *Environmental History of the Middle Ages* is a unique and unprecedented cultural survey of attitudes towards the environment during this period Humankind e tm s relationship with the environment

shifted gradually over time from a predominantly adversarial approach to something more overtly collaborative until a series of ecological crises in the late Middle Ages. With the advent of shattering events such as the Great Famine and the Black Death, considered efflorescences of the climate downturn known as the Little Ice Age that is comparable to our present global warming predicament, medieval people began to think of and relate to their natural environment in new and more nuanced ways. They now were made to be acutely aware of the consequences of human impacts upon the environment, anticipating the cyclical new ecology approach of the modern world. Exploring the entire medieval period from 500 to 1500 and ranging across the whole of Europe from England and Spain to the Baltic and Eastern Europe, John Aberth focuses his study on three key areas: the natural elements of air, water, and earth; the forest and wild; and domestic animals. Through this multi-faceted lens, *An Environmental History of the Middle Ages* sheds fascinating new light on the medieval environmental mindset. It will be essential reading for students, scholars, and all those interested in the Middle Ages.

The Work of Reform William Rhodes, 2025-09-15. *The Work of Reform* interweaves literary, economic, and environmental history to trace the influence that William Langland's harsh vision of enforced agrarian labor in *Piers Plowman* had on later medieval and early modern thinking about land and improvement in Britain and Ireland, culminating with Edmund Spenser's colonial writing. William Rhodes brings together a rich poetic archive with agrarian husbandry manuals, prose polemics, and imperial tracts to connect conflicts over land and labor on the English manor to those of Tudor Ireland, offering a new eco-Marxist literary history of ecological transformation across the medieval/modern divide. In the aftermath of the Black Death, the depopulation of the countryside, and the beginnings of the Enclosure Movement, English poets imagined enforced labor as a panacea for social unrest precipitated by environmental catastrophe. Arguing that *Piers Plowman* established how poetry could envision religious and economic transformation based on agrarian production, *The Work of Reform* reveals that the *Piers Plowman* tradition's valorization of agrarian toil was open to appropriation by later writers developing totalizing, top-down colonialist projects.

Southern Italy in the Late Middle Ages Eleni Sakellariou, 2011-12-09. This book combines economic history and theory to offer a positive reappraisal of the interaction between demographic forces, urbanization, commercialisation, and the role of the state and their impact on the late medieval economy of the kingdom of Naples.

Agriculture in the Middle Ages Del Sweeney, 1995. Explores the cultural framework within which changes in agricultural technology and economic organization occur, and the ways in which changes in the social fabric influence attitudes toward rural work and the peasantry.

Technology and Society in the Medieval Centuries Pamela O. Long, 2003. Pamela Long considers the ways in which different medieval cultures, from the Byzantine Empire to northern Europe, adopted and transformed technologies according to their own needs. Long introduces readers to recent scholarship and to some of the significant issues in the historiography of medieval technology.

Material Culture and Cultural Materialisms in the Middle Ages and Renaissance Curtis Perry, 2001. The essays in this collection challenge cultural

materialists in different disciplines to articulate specific relationships between modern theoretical positions and the ideas and conventions that shaped the production of medieval and Renaissance cultures in Europe

The Representation of Islam in British Museums Ian Heath, 2007 The role of museums in creating and maintaining both cultural identities and their stereotypes is an area of debate and discourse in both archaeology and museology Despite the long history of the collection and public display of Islamic material there has been no systematic research into either its representation or into public perceptions of these representations This programme of research represents the first such study of the representation of Islamic material culture in British museums This commences with the discussion and evaluation of the history of contact between the Islamic world and Europe in general and Britain in particular Much of the history of this discourse is framed in terms of supra regional identity i e European and Islamic or Muslim These are constructed identities and the history of their construction is discussed before moving on to consider contemporary issues In addressing the subject of the representation of Islam in museums this work undertakes to examine both its production and consumption The production of representation and the creation of identity are achieved in museums through the medium of the display of material whilst consumption occurs through the medium of visiting and the meaning made by visitors In order to evaluate such production displays of Islamic material in museums are the subject of critical analysis This research has a qualitative element and seeks to tap into the perceptions of museum visitors of current museum displays Given the role played by museums in the construction of identity the questions underpinning this are firstly what are the messages they receive about the world of Islam and secondly what do these displays say about the Islamic world past and present
