## **Air To Ground Operations:**

The Air-ground Operations System United States. Department of the Army,1970      **Solving the Air-Ground Dilemma: An Examination of Air Power's Relationship to Ground Operations** ,2000 This monograph examines the nature of air ground operations within the context of interdiction and close air support and their relationship to the Fire Support Coordination Line The primary research question for this study was whether changes to the current doctrine regarding deep operations and interdiction are required given the stakes the Army and the Air Force have in the deep battle area It analyzes the air ground dilemma by first examining how the relationship between Close Air Support Battlefield Air Interdiction and Air Interdiction changed between 1980 and 2000 It then examines the nature of the controversy surrounding Battlefield Air Interdiction and why it was never formally incorporated into Air Force Doctrine The study also explores the impact the AH 64 Apache Helicopter and the Army Tactical Missile System had on the conduct of air ground operations as well as how the placement of the Fire Support Coordination Line effected the relationship between air and ground combat power Finally the monograph examines different solutions to the air ground problem to determine which has the greatest potential

Hyten,ARMY COMMAND AND GENERAL STAFF COLL FORT LEAVENWORTH KS SCHOOL OF ADVANCED MILITARY STUDIES.,U.S. Army Command and General Staff College. School of Advanced Military Studies,1988 Air interdiction is a critical component on the modern battlefield and an essential element of operational fires to the operational commander It must bear a relationship to ground operations to be truly effective but that relationship has not been adequately clarified in the past or in current doctrine Combat air interdiction operations since WWII have tended to become almost independent Air Force efforts without close integration with the ground effort The result has been a lack of emphasis on this essential relationship in current doctrine and practice This monograph is an effort to clarify that relationship This study examines interdiction theory from the perspective of classic pre air era theorists and then modern air era theorists The historical example is based on air interdiction operations in the Korean War That provides a framework of limited war significantly varied ground operations and air interdiction operations conducted by the new U S Air Force The monograph concludes by evaluating the relationship between air interdiction and ground operations in Korea It presents a theoretical construct for the nature of the optimal relationship and observations for how to employ that relationship for maximum effect The implications are based on current Army and Air Force doctrine which recognizes the importance of air interdiction but does not clearly specify the need for the relationship to ground efforts KR      **Army Reservist** ,1955

Army Reserve Magazine, *Armor*, 1974 *Combat Communications Within the Corps* United States. Department of the Army, 1978 MacArthur's Airman Thomas E. Griffith, 1998 Thomas Griffith offers a critical assessment of George C Kenney's numerous contributions to MacArthur's war efforts. He depicts Kenney as a staunch proponent of airpower's ability to shape the outcome of military engagement and a commander who shared MacArthur's strategic vision. *Wolfram Von Richthofen* James S. Corum, 2008 The first book-length biography of the Luftwaffe's top field commander Wolfram von Richthofen, a master of the tactical and operational air war, one of the key catalysts in the resurrection of the German air force and an ardent and unwavering follower of the Fuhrer. Combined Arms Warfare in the Twentieth Century Jonathan Mallory House, 2001 For centuries the world has witnessed the development and use of increasingly complex and powerful military systems and technologies. In the process, the art of war has truly become the art of combined arms warfare, in which infantry, artillery, air support, intelligence, and other key elements are all coordinated for maximum effect. Nowhere has this trend been more visible than in the history of twentieth-century warfare. Originally published as an essential in-house study for U.S. Army officers during the 1980s, this much-revised and expanded edition remains the most complete study available on the subject. Rewritten with a much wider readership in mind, it both retains its enormous practical utility for military professionals and provides a valuable and appealing introduction for scholars and general readers. Jonathan House, author of the original work, brings the story of combined arms up to the present, covering among other things Desert Storm, the war in Chechnya, and the rise of smart weapons and related technologies. He traces the evolution of tactics, weapons, and organization in five major militaries: American, British, German, Russian, and French, over 100 years of warfare. Revealing both continuities and contrasts within and between these fighting forces, he also provides illuminating glimpses of Israeli and Japanese contributions to combined arms doctrine. Expanding his insightful analysis of the world wars and the wars in Korea and Vietnam, House also offers much new material focused on the post-Vietnam period. Throughout, he analyzes such issues as command and control problems of highly centralized organizations, the development of special operations forces, advances in weapons technology, including ballistic and anti-ballistic missile systems, the trade-offs involved in using heavy versus light armed forces, and the enduring obstacles to effective cooperation between air and land forces. His strong critique of the air superiority propaganda that came out of the Gulf War is sure to spark some heated debates. Rigorously comparative, House's study addresses significant questions about how nations prepare for war, learn or don't learn its harsh lessons, and adapt to changing times and technologies. Unique in the annals of the literature on warfare, it will be the standard work on this subject for a long time to come. A Systems Analysis of Short Haul Air Transportation Massachusetts Institute of Technology. Flight Transportation Laboratory, 1965. Preface: This report has been prepared in the MIT Flight Transportation Laboratory under the supervision of Professors R. H. Miller and R. W. Simpson, with contributions from H. A. Fitzhugh, J. F. study carried out by the Massachusetts Institute of Technology for the NORTH EAST CORRIDOR TRANSPORTATION PROJECT of the United States Department of Commerce The authors wish to express their appreciation to the many personnel from airframe and engine manufacturers and the airline operators who contributed so generously of their time and gave access to various detailed information as background for this study Other reports prepared by M I T under this contract are Part I Survey of Technology for High Speed Ground Transport Part IA Bibliography of High Speed Ground Transport Part II High Priority Research Tasks for High Speed Ground Transport Part IV Cost Methodology and Cost Models for High Speed Ground Transport Flight ,1924 *The Official Index to the Times* ,1968 **Van Nostrand's Eclectic Engineering Magazine** ,1878 **Lesson Plans** United States. Air Force,1955 To acquaint students with the over all organization of the United States Air Force and to examine in detail the components of the tactical Air Force to include the general functions of each Ground Truth L. Ross Roberts,2006 Organizing the services to become more interdependent makes sense operationally and strategically Yet experiences in Afghanistan and Iraq demonstrate that the services have much to accomplish to institutionalize joint interdependence despite the spirit of cooperation that now exists between the air and land services in both areas of operations The simultaneous ground operations of the US Army s V Corps and the US Marine Corps I MEF during Operation Iraqi Freedom provides a unique opportunity to evaluate the issues of joint interdependence and propose potential solutions towards creating mutually enabling air and ground operations This recent experience combined with the historical accounts of past air ground cooperation provides some of the answers to the questions posed above and is also indicative of the difficulty in actually institutionalizing the organizational training and doctrinal changes necessary to make an interdependent land and air force This will be hard work Understanding the implications of creating a truly interdependent force capable of withstanding the pressures of the next inter war period is the first step
