Agent Communication:

Agent Communication Rogier M. van Eijk, Marc-Philippe Huget, Frank Dignum, 2005-02-23 In this book we present a collection of papers around the topic of agent communication. The communication between agents has been one of the major topics of research in multiagent systems. The current work can therefore build on a number of previous Workshops of which the proceedings have been published in earlier volumes in this series. The basis of this collection is formed by the accepted submissions of the Workshop on Agent Communication held in conjunction with the AAMAS Conference in July 2004 in New York. The workshop received 26 submissions of which 14 were selected for publication in this volume. Besides the high quality workshop papers we noticed that many papers on agent communication found their way to the main conference. We decided therefore to invite a number of authors to revise and extend their papers from this conference and to combine them with the workshop papers. We believe that the current collection comprises a very good and quite complete overview of the state of the art in this area of research and gives a good indication of the topics that are of major interest at the moment. The papers can roughly be divided over the following five themes: social commitments, multiparty communication, content languages, dialogues and conversations, speech acts. Although these themes are of course not mutually exclusive they indicate some main directions of research. We therefore have arranged the papers in the book according to the topics indicated above.

Agent Communication II Frank Dignum, Rogier van Eijk, Roberto Flores, 2008-08-19 This book constitutes the thoroughly refereed post-proceedings of the two International Workshops on Agent Communication AC 2005 and AC 2006 held in Utrecht, Netherlands in July 2005 and in Hakodate, Japan in May 2006 as associated events of AAMAS 2005/2006. The 20 revised full papers cover semantics of agent communication, commitments in agent communication, protocols and strategies as well as reliability and overhearing.

Communication in Multiagent Systems Marc-Phillipe Huget, 2003-06-25 Agents in multiagent systems are concurrent, autonomous entities that need to coordinate and to cooperate so as to perform their tasks. These coordination and cooperation tasks might be achieved through communication. Communication, also called interaction by some authors, thus represents one of the major topics in multiagent systems. The state of the art of research on communication in multiagent systems is presented in this book. First three seminal papers by Cohen and Perrault, by Singh and by Davis and Smith present background information and introduce the newcomer to the area. The main part of the book is devoted to current research work dealing with agent communication: communication for coordination and argumentation, protocols and dialogue games, and conversational agents. Finally, the last paper deals with the future of agent communication.

Location-independent Communication for Mobile Agents Peter Sewell, Paweł T. Wojciechowski, Benjamin C. Pierce, 1999 Abstract We study communication primitives for interaction between mobile agents. They can be classified into two groups. At a low level there are location-dependent primitives that require a programmer to know the current site of a mobile agent in order to communicate with it. At a high level there are location-independent primitives that allow communication with a

mobile agent irrespective of its current site and of any migrations Implementation of these requires delicate distributed infrastructure We propose a simple calculus of agents that allows implementations of such distributed infrastructure algorithms to be expressed as encodings or compilations of the whole calculus into the fragment with only location dependent communication These encodings give executable descriptions of the algorithms providing a clean implementation strategy for prototype languages The calculus is equipped with a precise semantics providing a solid basis for understanding the algorithms and for reasoning about their correctness and robustness Two sample infrastructure algorithms are presented as encodings

Issues in Agent Communication Frank Dignum, Mark Greaves, 2000-09-29 A first attempt to develop a standardized agent communication language ACL resulted in KQML probably the most widely used such language However a lot of technical work remains to be done Even worse so far there seems to be little consensus on the basics of agent communication and there is no clear understanding of the semantics of individual speech acts or even of the basic concepts that should be used to define the semantics This book documents two workshops on communication in MAS held in 1999 one on Specifying and Implementing Conversation Policies SICP and the other in Agent Communication Languages and presents the current state of the art of research in the field A detailed introductory overview by the volume editors highlights a number of issues that play an important role in agent communication
