Fairchild, 2005-07-08 There is an ever increasing demand for a standard way to transport colours among devices on the Internet and for achieving colour fidelity across digital media The rapid growth in colour imaging technology has led to the emergence of colour management systems These systems require colour appearance models so that images produced in one medium and viewed in a particular environment may be reproduced in a second medium and viewed under different conditions The eagerly anticipated second edition of Colour Appearance Models brings the fundamental issues and current solutions in the area of colour appearance modelling together in a single place for those needing to solve practical problems or looking for background for ongoing research projects This book provides the relevant information for an updated review of colour appearance and provide details of many of the most widely used models to date for example Nayatani et al Hunt and RLAB and the ATD and LLAB appearance models that are of increasing interest for some applications It also includes the recently formulated CIECAM02 model that represents a significant improvement of CIECAM97S and is the best possible model based on current knowledge Fairchild presents an updated overview of device independent colour imaging and finally introduces the concept of image appearance modelling as a potential future direction for colour appearance modelling research A website accompanies this text that lists developments publications and calculations related to the material in this book

Comparing Color Appearance Models Using Pictorial Images Taek Gyu Kim, 1994 Eight different color appearance models were tested using pictorial images A psychophysical paired comparison experiment was performed where 30 color normal observers judged reference and test images via successive Ganzfeld haploscopic viewing such that each eye maintained constant chromatic adaptation and inter ocular interactions were minimized It was found that models based on

von Kries had best performance specifically CIELAB HUNT RLAB and von Kries Abstract **Color-appearance Modeling for Cross-media Image Reproduction** Karen M. Braun,1996 Five color appearance transforms were tested under a variety of conditions to determine which is best for producing CRT reproductions of original printed images The transforms included von Kries chromatic adaptation CIELAB color space RLAB color appearance model Hunt s color appearance model and Nayatani s color appearance model It was found that RLAB produced the best matches for changes in white point luminance level and background changes but did not accurately predict the effect of surround The ability of CIELAB color space was equal to that of RLAB in many cases and performed better for changes in surround Expert observers generated CRT images in one viewing condition that they perceived to match an original image viewed in another condition This technique produced images that were equal to or better than the best color appearance model tested and is a useful technique to generate color appearance data for developing new models and testing existing models Abstract **Correlated Color Temperature in Color Appearance Models** ,2010 **Advances in Printing and Packaging Technologies** Yun Ouyang,Min Xu,Li Yang,Xun Ting Liu,2012-12-13 Selected peer reviewed papers from the 2nd China Academic Conference on Printing and Packaging CACPP 2012 October 19 20 2012 Beijing China **Color Imaging: Device-independent Color, Color Hard Copy, and Graphic Arts** ,2001 *Western Machinery and Steel World ...* ,1952 **Color Hard Copy and Graphic Arts** ,1993 Device-independent Color Imaging and Imaging Systems Integration Ricardo J.
