Endoscopic Color Atlas of Ear Diseases Khan Mubarak Muhamed, Parab Sapna Ramkrishna, 2011 **Colour Atlas of Mouth, Throat and Ear Disorders in Children** D.J. Bain, R.A. Morton, Philip Carter, 2012-12-06 Disorders of the upper respiratory tract and the ear medical care account for almost 50% of all illness in children under 12 years. The photographs of throats were taken on Kodak 5 years and 30% in children aged 5-12 years. The chrome 64 film using a Micro Nikkor 55 mm lens and time taken to examine the mouth, throat, and ear in a Nikonomat FTN camera with a Sunpak GX 8R ri flash. Young children are frequently brief and often no more than a fleeting glimpse can be obtained of the area affected. In the case of ear examination photography, with this in mind, we considered that an atlas of otoscopy through an auriscope provides serious limitations as common conditions were required in the literature of the pictures obtained give only a narrow angle of view. Childhood diseases allowing only a small area of the tympanic membrane. This atlas includes conditions which lend themselves to be seen at one time. For this reason, the ear photographs serve to illustrate and by no means comprehensive photographs were taken using a 4 mm diameter Storz Tele lens. The photographs were all taken from the otoscope. This provides a wide angle view of the children presenting in general practice in the United Kingdom: whole eardrum and adjacent external auditory canal.

For the new edition, many new or improved otoscopic photographs have been added. Where appropriate, the pathology behind the otologic appearances has been provided in the form of color photographs from the operative site.
