Summary of the essay that declared the discovery of similia similibus

Essay on a new principle for ascertaining the curative powers of drugs With a few glances at those hitherto employed-

**Published in Hufeland's Journal der praktischen Arzneykunde. Vol. ii. Part iii. 1796, collected and translated to English by R.E. Dudgeon*

Begins the Essay by citing French Academy of Sciences (started in AD 1666 <https://www.academie-sciences.fr/en/>) – study on chemistry for identifying curative properties – turned negative and denied chemistry's role in medicine –

Hahnemann is not of this opinion – appreciating the role of chemistry in medicine.

Citing many examples to show that **chemistry cannot be excluded from a share in the discovery of the medicinal powers of drugs.**

that chemistry **should not be** consulted with respect to those medicinal powers which relate, not to hurtful substances to be acted on immediately in the human body, **but to changes wherein the functions of the animal organism are first concerned.**

explains the limitations of experimentation on animals

when above mentioned methods exhausted to give data, the systematizer looks for external signs of plants to make a relationship with the disease (they are very deceptive) gives examples.

Nothing remains for us but experiment on the human body. But what kind of experiment? Accidental or methodical?
