## **Combination Therapy In Urological Malignancy:**

Combination Therapy in Urological Malignancy Philip H. Smith, 2012-12-06 Any discussion of the present success in management of urological cancers evokes a mixed response Oncologists and urologists can enjoy the success with chemotherapy for testicular cancers but cannot forget the dismal results with any form of treatment other than surgery for renal carcinoma But these are the less frequent urological tumours what are the attitudes to the more common prostate and bladder cancers Intensive study many clinical trials and much debate lead us to the conclusion that we understand them better we can tailor the treatment more appropriately to the individual patient but there remains some uncertainty as to the overall success that we have achieved There have been no striking changes in the 5 year survival data Clinicians tend to see their success in terms of their special interest Radiotherapists point to their success in stage reduction but what are we to do with the many patients whose tumour is unaltered by radiotherapy Urological surgeons and especially those who are still influenced by the shadow of Halsted point to their success in excising the cancer but apart from that highly selected group what are we to do for the very large number of patients for whom surgery is inappropriate Bystanders can only watch and listen to the arguments for and against these views **Chemotherapy and Urological Malignancy** A.S.D.

Spiers, 2012-12-06 Chemotherapy for malignant disease has brought about many rapid and often spectacular improvements in the survival rate of some groups of patients Yet enthusiasm for these successes has in part been offset by the problems in evaluating responses to treatment and by the disappointment of failing to check the progress of still so many other tumours These reactions will be no surprise to the medical historian but perhaps the expectations from scientific progress nowadays sometimes demand more than can reasonably be expected Another expectation is that any review of chemotherapy is completely up to date even prophetic Such is the expansion of the subject that new drugs and trial results are continually being reported but it is this very mass of information that creates its own problems and makes many clinicians despair of finding a balanced judgement on all of this information This was the challenge accepted by Professor Spiers He then gathered together a group of colleagues who are amongst the acknowledged leaders in the field of chemotherapy for urological tumours all of whom have made important contributions to this subject However each chapter is not merely a record of the author's experience but encompasses an assessment of past and present practice as well as perspectives in diagnosis and management Almost all chapters include reference to published work up to and including 1981
