Combinatorial Optimization Papers From The Dimacs Special Year:

Combinatorial Optimization William Cook, László Lovász, Paul D. Seymour, 1995 This book grew out of the fourth Special Year at DIMACS which was devoted to the subject of combinatorial optimization During the special year a number of workshops small and large dealt with various aspects of this theme Organizers of the workshops and selected participants were asked to write surveys about the hottest results and ideas in their fields Therefore this book is not a set of conference proceedings but rather a carefully refereed collection of invited survey articles written by outstanding researchers Aimed at researchers in discrete mathematics operations research and the theory of computing this book offers an in depth look at many topics not treated in textbooks

Combinatorial Optimization: Some Problems and Trends DIMACS (GROUP),László Lovász,1992

Abstract In this working paper I discuss some issues with the aim of suggesting research topics for the DIMACS special year Combinatorial Optimization I plan to focus on the unorthodox hoping that at least one of the areas I describe below will gain new momentum as a result of this special year A companion preprint written by Martin Gr tsel and myself as a chapter of the Handbook of Combinatorics describes the state of the art concentrating on the well established methods and models like polyhedral combinatorics and should be available soon Building Bridges Martin Grötschel,2008 Discrete mathematics and theoretical computer science are closely linked research areas with strong impacts on applications and various other scientific disciplines Both fields deeply cross fertilize each other One of the persons who particularly contributed to building bridges between these and many other areas is Laszlo Lovasz a scholar whose outstanding scientific work has defined and shaped many research directions in the last 40 years A number of friends and colleagues all top authorities in their fields of expertise and all invited plenary speakers at one of two conferences in August 2008 in Hungary both celebrating Lovasz s 60th birthday have contributed their latest research papers to this volume This collection of articles offers an excellent view on the state of combinatorics and related topics and will be of interest for experienced specialists as well as young researchers Book Jacket Combinatorial Geometry János Pach,Pankaj K. Agarwal,1995-10-20 How many objects of a given shape and size can be packed into a large box of fixed volume Can one plant n trees in an orchard not all along the same line so that every line determined by two trees will pass through a third These questions raised by Hilbert and Sylvester roughly one hundred years ago have generated a lot of interest among professional and amateur mathematicians and scientists They have led to the birth of a new mathematical discipline with close ties to classical geometry and number theory and with many

applications in coding theory potential theory computational geometry computer graphics robotics etc Combinatorial Geometry offers a self contained introduction to this rapidly developing field where combinatorial and probabilistic counting methods play a crucial role This book has grown out of the material of both undergraduate and graduate courses in mathematics and computer science given by J nos Pach at the Courant Institute of Mathematical Sciences New York University Divided into two parts Arrangements of Convex Sets and Arrangements of Points and Lines it presents and explains some of the most important and ingenious results in combinatorial geometry including Dowker s theorems F ry s theorem Fejes T th s theorems Methods of Blichfeldt and Rogers Minkowski Hlawka theorem Koebe s representation theorem Lipton Tarjan separator theorem Theorems of Erd s Tur n and Ramsey Szemer di s regularity lemma Szemer di Trotter theorems Methods of Clarkson Edelsbrunner Guibas Sharir and Welzl Counterexample to Borsuk s conjecture
