

Multiprocessing of Combinatorial Search Problems

Benjamin W. Wah, Guo-jie Li, and Chee Fen Yu
Purdue University

Multiprocessor solutions to complex science and engineering problems require an effective representation of the problem and an efficient search. Functional requirements for search algorithms must open up a variety of architectures for any problem.

Multiprocessing refers to the concurrent execution of processes (or programs) in a computer hardware complex with more than one independent processing unit.¹ Conventionally, multiprocessing is defined as a centralized computer system with central processors, input-output processors, data channels, and special-purpose processors.

With the advent of VLSI technology, it has become cost effective to include a large number of general- and special-purpose processors in a multiprocessing system. The definition of *multiprocessing* has been extended to systems such as multiprocessors, systolic arrays, and dataflow computers. In this sense, parallel processing and multiprocessing can be considered synonymous. Examples of such systems range from the IBM 360 computers with channels, Illiac IV, Staran, Cm*, Trac, MPP, and the Cray X-MP to the latest fifth-generation computer system.

Major Issues of multiprocessing

In using a multiprocessing system to solve a given problem, tremendous effort can be spent in designing a good parallel algorithm. The objective is to obtain an algorithm with a speedup proportional to the number of processors over the best available serial

algorithm. This must be done within the architectural constraints, and it involves trade-offs in computation time, memory space, and communications requirements.

The applicability of multiprocessing to the problem is also an important issue. The problem should be *polynomially solvable by a serial computer*. Intractable problems with complexity that is exponential in respect to problem size cannot be solved in polynomial time* unless an exponential number of processors are used.² This is, of course, technologically infeasible for large problems. For example, if the best serial algorithm requires 2^N micro seconds to solve a problem of size N , it would require 2^{60} microseconds, or 366 centuries, to solve a problem of size 60. Assuming that a linear speedup is possible, it would require 2^{60} processors to solve the problem in approximately one second, and 2^{60} processors to solve the problem in 20 minutes. For intractable problems, approximate solutions should be used in order to complete the algorithm in a reasonable time.

Multiprocessing is generally used to improve the computational efficiency of solving a given problem, *not to extend the solvable problem space of the problem*. Suppose that it takes N^k units of time to solve a problem of size N , where k is a constant (≥ 1). Assuming a linear speedup, a parallel algorithm with N processors in N^k units of time can solve problem of size $N^{k+1/2}$. For $k=3$, this size is $N^{3.5}$. Similarly, for a serial algorithm that takes k^N , $k > 1$ units of time to solve a problem, the solvable problem size

*Saying that a problem is intractable with an exponential complexity implies that the best parallel algorithm cannot have a polynomial complexity with a polynomial number of processors. Supposing this is false, a serial simulation of this parallel algorithm can solve the problem in polynomial time, hence contradicting the fact that the problem has an exponential complexity.

Combinatorial Search Problems

Weixiong Zhang

Combinatorial Search Problems:

Combinatorial Search: From Algorithms to Systems Youssef Hamadi, 2013-10-29 Although they are believed to be unsolvable in general tractability results suggest that some practical NP hard problems can be efficiently solved Combinatorial search algorithms are designed to efficiently explore the usually large solution space of these instances by reducing the search space to feasible regions and using heuristics to efficiently explore these regions Various mathematical formalisms may be used to express and tackle combinatorial problems among them the constraint satisfaction problem CSP and the propositional satisfiability problem SAT These algorithms or constraint solvers apply search space reduction through inference techniques use activity based heuristics to guide exploration diversify the searches through frequent restarts and often learn from their mistakes In this book the author focuses on knowledge sharing in combinatorial search the capacity to generate and exploit meaningful information such as redundant constraints heuristic hints and performance measures during search which can dramatically improve the performance of a constraint solver Information can be shared between multiple constraint solvers simultaneously working on the same instance or information can help achieve good performance while solving a large set of related instances In the first case information sharing has to be performed at the expense of the underlying search effort since a solver has to stop its main effort to prepare and communicate the information to other solvers on the other hand not sharing information can incur a cost for the whole system with solvers potentially exploring unfeasible spaces discovered by other solvers In the second case sharing performance measures can be done with little overhead and the goal is to be able to tune a constraint solver in relation to the characteristics of a new instance this corresponds to the selection of the most suitable algorithm for solving a given instance The book is suitable for researchers practitioners and graduate students working in the areas of optimization search constraints and computational complexity

State-Space Search Weixiong Zhang, 2012-12-06 This book is about problem solving Specifically it is about heuristic state space search under branch and bound framework for solving combinatorial optimization problems The two central themes of this book are the average case complexity of heuristic state space search algorithms based on branch and bound and their applications to developing new problem solving methods and algorithms Heuristic state space search is one of the fundamental problem solving techniques in Computer Science and Operations Research and usually constitutes an important component of most intelligent problem solving systems The search algorithms considered in this book can be classified into the category of branch and bound Branch and bound is a general problem solving paradigm and is one of the best techniques for optimally solving computation intensive problems such as scheduling and planning The main search algorithms considered include best first search depth first branch and bound iterative deepening recursive best first search and space bounded best first search Best first search and depth first branch and bound are very well known and have been used extensively in Computer Science and Operations Research One important feature of depth first branch and bound is that it

only requires space this is linear in the maximal search depth making it very often a favorable search algorithm over best first search in practice Iterative deepening and recursive best first search are the other two linear space search algorithms Iterative deepening is an important algorithm in Artificial Intelligence and plays an irreplaceable role in building a real time game playing program

Local Search Algorithms for Combinatorial Problems Thomas G. Stutzle, 1999-01-01 Many problems of enormous practical and theoretical importance are of combinatorial nature Combinatorial problems are intriguing because they are easy to state but many of them are very difficult to solve they are NP hard Local search and extensions thereof based on metaheuristics which have been developed at the interface between Artificial Intelligence and Operations Research are among the best available techniques for obtaining high quality solutions to large instances of NP hard problems in a reasonable time This book presents contributions to several research aspects of metaheuristics The contributions concern i the introduction of a new methodology for analyzing the run time behavior of metaheuristics and in general randomized algorithms ii the derivation of improved algorithmic variants for known metaheuristics in particular for ant colony optimization and iterated local search iii the exploration of new applications of specific metaheuristics and iv the characterization of the run time behavior of specific metaheuristics The achievements described in this book can be regarded as a further step towards achieving the goals of research on metaheuristics the development of general and flexible but at the same time powerful and efficient algorithms to approximately solve hard combinatorial problems

Principles and Practice of Constraint Programming - CP '95 Ugo Montanari, 1995-09-06 This book constitutes the proceedings of the First International Conference on Principles and Practice of Constraint Programming CP 95 held in Cassis near Marseille France in September 1995 The 33 refereed full papers included were selected out of 108 submissions and constitute the main part of the book in addition there is a 60 page documentation of the four invited papers and a section presenting industrial reports Thus besides having a very strong research component the volume will be attractive for practitioners The papers are organized in sections on efficient constraint handling constraint logic programming concurrent constraint programming computational logic applications and operations research

Search Problems Rudolf Ahlswede, Ingo Wegener, 1987-12-28 Introductory remarks and definitions A sample search model Search problems with error free tests Binary search problems without restrictions on the tests Alphabetic codes and binary search trees Sorting problems Weighting problems and geometric problems Special search problems with error free tests Search problems having tests with chance errors Stochastic approximation Search problem having answers with chance errors and channels with feedback Identification and ranking problems Search problems with inspections Minimizing expected search costs Maximizing the probability of success with limited resources More general models for search problems with inspection

On Algorithm Selection, with an Application to Combinatorial Search Problems Lars Kotthoff, University of St. Andrews. Department of Computer Science, Engineering and Physical Sciences Research Council, Scottish Informatics and Computer Science Alliance, 2012

State Space Search Fouad Sabry, 2023-06-28 What Is State Space Search State space search is a technique that is employed in the field of computer science particularly artificial intelligence AI in which consecutive configurations or states of an instance are explored with the objective of finding a goal state with the desired feature The term state space search comes from the phrase state space which refers to the space in which the process takes place How You Will Benefit I Insights and validations about the following topics Chapter 1 State Space Search Chapter 2 Brute Force Search Chapter 3 Heuristic in Computer Science Chapter 4 Local Search Optimization Chapter 5 Game Tree Chapter 6 Constraint Satisfaction Problem Chapter 7 Adversarial Search Chapter 8 Markov Decision Process Chapter 9 Reinforcement Learning Chapter 10 Combinatorial search II Answering the public top questions about state space search III Real world examples for the usage of state space search in many fields IV 17 appendices to explain briefly 266 emerging technologies in each industry to have 360 degree full understanding of state space search technologies Who This Book Is For Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of state space search Algorithms - ESA '97 Rainer Burkard, Gerhard Woeginger, 1997-08-27 This book constitutes the refereed proceedings of the 5th Annual International European Symposium on Algorithms ESA 97 held in Graz Austria September 1997 The 38 revised full papers presented were selected from 112 submitted papers The papers address a broad spectrum of theoretical and applicational aspects in algorithms theory and design Among the topics covered are approximation algorithms graph and network algorithms combinatorial optimization computational biology computational mathematics data compression distributed computing evolutionary algorithms neural computing online algorithms parallel computing pattern matching and others Entropy, Search, Complexity Imre Csiszár, Gyula O.H. Katona, Gabor Tardos, 2007-04-05 The present volume is a collection of survey papers in the elds given in the title They summarize the latest developments in their respective areas More than half of the papers belong to search theory which lies on the borderline of mathematics and computer science information theory and combinatorics respectively The volume is slightly related to the twin conferences Search And Communication Complexity and Information Theory In Mathematics held at Balatonlelle Hungary in 2000 These conferences led us to believe that there is a need for such a collection of papers The paper written by Martin Aigner starts with the following relatively new search problem Given n boolean variables as input one has to find one of them whose value is in majority The goal is to minimize the number of tests needed for this where one test is to compare two input variables for equality The paper surveys the large set of problems and results which grew out of this one In the traditional search model an unknown element is sought in a finite set based on the information that the unknown element is or is not in some asked subsets A variant is when a 0 1 function is given on the underlying set and only the values of this function at the unknown element x is sought rather than x itself This is called the recognition problem Reactive Search and Intelligent Optimization Roberto Battiti, Mauro Brunato, Franco Mascia, 2008-12-16 Reactive Search and Intelligent

Optimization is an excellent introduction to the main principles of reactive search as well as an attempt to develop some fresh intuition for the approaches. The book looks at different optimization possibilities with an emphasis on opportunities for learning and self-tuning strategies. While focusing more on methods than on problems, problems are introduced wherever they help make the discussion more concrete or when a specific problem has been widely studied by reactive search and intelligent optimization heuristics. Individual chapters cover reacting on the neighborhood, reacting on the annealing schedule, reactive prohibitions, model-based search, reacting on the objective function, relationships between reactive search and reinforcement learning, and much more. Each chapter is structured to show basic issues and algorithms, the parameters critical for the success of the different methods discussed, and opportunities for the automated tuning of these parameters.

Hybrid Algorithms for On-Line Search and Combinatorial Optimization Problems Yury V.

Smirnov, Carnegie-Mellon Univ. Pittsburgh, PA, Dept. of Computer Science, 1997. Abstract: By now Artificial Intelligence (AI), Theoretical Computer Science (CS) theory, and Operations Research (OR) have investigated a variety of search and optimization problems. However, methods from these scientific areas use different problem descriptions, models, and tools. They also address problems with particular efficiency requirements. For example, approaches from CS theory are mainly concerned with the worst-case scenarios and are not focused on empirical performance. A few efforts have tried to apply methods across areas. Usually, a significant amount of work is required to make different approaches talk the same language, be successfully implemented, and finally solve the actual same problem with an overall acceptable efficiency. This thesis presents a systematic approach that attempts to advance the state of the art in the transfer of knowledge across the above-mentioned areas. In this work, we investigate a number of problems that belong to or are close to the intersection of areas of interest of AI, OR, and CS theory. We illustrate the advantages of considering knowledge available in different scientific areas and of applying algorithms across distinct disciplines through successful applications of novel hybrid algorithms that utilize beneficial features of known efficient approaches. Testbeds for such applications in this thesis work include both open theoretical problems and ones of significant practical importance. We introduce a representation change that enables us to question the relation between the Pigeonhole Principle and Linear Programming Relaxation. We show that both methods have exactly the same bounding power. Furthermore, an even stronger relation appears to be between the two methods. The Pigeonhole Principle is the Dual of Linear Programming Relaxation. Such a relation explains the hidden magic of the Pigeonhole Principle, namely its power in establishing upper bounds and its effectiveness in constructing optimal solutions. We also address various groups of problems that arise in agent-centered search. In particular, we consider goal-directed exploration in which search by a physical or fictitious agent with limited lookahead occurs in partially or completely unknown domains. The resulting Variable Edge Cost Algorithm (VECA) becomes the first method of solving goal-directed exploration problems that incorporates strong guidance from heuristic knowledge yet is still capable of providing linear worst-case guarantees even for complex search.

domains and misleading heuristics This work aims at expanding the handset of AI tools that concern search efficiency and provides the foundation for further development of hybrid methods cross fertilization and successful applications across AI CS theory OR and other Computational Sciences *Parallel Algorithm and Computation* Virendra Kumar, This book comprises all the aspects like principle and techniques for parallel algorithm Parallel processing system for B Tech MCA M Tech Students of computer science and engineering information technology This book consist the syllabus of all Indian Universities It also provides the basic concepts of parallel algorithm and computations **1993 Computer Architectures for Machine Perception** Magdy A. Bayoumi, Larry S. Combinatorial Search Problems Introduction

Combinatorial Search Problems Offers over 60,000 free eBooks, including many classics that are in the public domain. Open Library: Provides access to over 1 million free eBooks, including classic literature and contemporary works. Combinatorial Search Problems Offers a vast collection of books, some of which are available for free as PDF downloads, particularly older books in the public domain. Combinatorial Search Problems : This website hosts a vast collection of scientific articles, books, and textbooks. While it operates in a legal gray area due to copyright issues, its a popular resource for finding various publications. Internet Archive for Combinatorial Search Problems : Has an extensive collection of digital content, including books, articles, videos, and more. It has a massive library of free downloadable books. Free-eBooks Combinatorial Search Problems Offers a diverse range of free eBooks across various genres. Combinatorial Search Problems Focuses mainly on educational books, textbooks, and business books. It offers free PDF downloads for educational purposes. Combinatorial Search Problems Provides a large selection of free eBooks in different genres, which are available for download in various formats, including PDF. Finding specific Combinatorial Search Problems, especially related to Combinatorial Search Problems, might be challenging as theyre often artistic creations rather than practical blueprints. However, you can explore the following steps to search for or create your own Online Searches: Look for websites, forums, or blogs dedicated to Combinatorial Search Problems, Sometimes enthusiasts share their designs or concepts in PDF format. Books and Magazines Some Combinatorial Search Problems books or magazines might include. Look for these in online stores or libraries. Remember that while Combinatorial Search Problems, sharing copyrighted material without permission is not legal. Always ensure youre either creating your own or obtaining them from legitimate sources that allow sharing and downloading. Library Check if your local library offers eBook lending services. Many libraries have digital catalogs where you can borrow Combinatorial Search Problems eBooks for free, including popular titles. Online Retailers: Websites like Amazon, Google Books, or Apple Books often sell eBooks. Sometimes, authors or publishers offer promotions or free periods for certain books. Authors Website Occasionally, authors provide excerpts or short stories for free on their websites. While this might not be the Combinatorial Search Problems full book , it can give you a taste of the authors writing style. Subscription Services Platforms like Kindle Unlimited or Scribd offer subscription-based access to a wide range of Combinatorial Search Problems eBooks, including some popular titles.

FAQs About Combinatorial Search Problems Books

What is a Combinatorial Search Problems PDF? A PDF (Portable Document Format) is a file format developed by Adobe that preserves the layout and formatting of a document, regardless of the software, hardware, or operating system used to view or print it. **How do I create a Combinatorial Search Problems PDF?** There are several ways to create a PDF: Use software like Adobe Acrobat, Microsoft Word, or Google Docs, which often have built-in PDF creation tools. **Print to PDF:** Many applications and operating systems have a "Print to PDF" option that allows you to save a document as a PDF file instead of printing it on paper. **Online converters:** There are various online tools that can convert different file types to PDF. **How do I edit a Combinatorial Search Problems PDF?** Editing a PDF can be done with software like Adobe Acrobat, which allows direct editing of text, images, and other elements within the PDF. Some free tools, like PDFescape or Smallpdf, also offer basic editing capabilities. **How do I convert a Combinatorial Search Problems PDF to another file format?** There are multiple ways to convert a PDF to another format: Use online converters like Smallpdf, Zamzar, or Adobe Acrobat's export feature to convert PDFs to formats like Word, Excel, JPEG, etc. Software like Adobe Acrobat, Microsoft Word, or other PDF editors may have options to export or save PDFs in different formats. **How do I password-protect a Combinatorial Search Problems PDF?** Most PDF editing software allows you to add password protection. In Adobe Acrobat, for instance, you can go to "File" -> "Properties" -> "Security" to set a password to restrict access or editing capabilities. **Are there any free alternatives to Adobe Acrobat for working with PDFs?** Yes, there are many free alternatives for working with PDFs, such as: LibreOffice: Offers PDF editing features. PDFsam: Allows splitting, merging, and editing PDFs. Foxit Reader: Provides basic PDF viewing and editing capabilities. **How do I compress a PDF file?** You can use online tools like Smallpdf, ILovePDF, or desktop software like Adobe Acrobat to compress PDF files without significant quality loss. Compression reduces the file size, making it easier to share and download. **Can I fill out forms in a PDF file?** Yes, most PDF viewers/editors like Adobe Acrobat, Preview (on Mac), or various online tools allow you to fill out forms in PDF files by selecting text fields and entering information. **Are there any restrictions when working with PDFs?** Some PDFs might have restrictions set by their creator, such as password protection, editing restrictions, or print restrictions. Breaking these restrictions might require specific software or tools, which may or may not be legal depending on the circumstances and local laws.
