Aseera, 1981 Combustion of Polymer Materials Rosa M Aseeva, Gennadifi Efremovich Zaikov, 1988-05-12 **Characterization and Failure Analysis of Plastics** ASM International, Steve Lampman, 2003-01-01 The selection and application of engineered materials is an integrated process that requires an understanding of the interaction between materials properties manufacturing characteristics design considerations and the total life cycle of the product This reference book on engineering plastics provides practical and comprehensive coverage on how the performance of plastics is characterized during design property testing and failure analysis The fundamental structure and properties of plastics are reviewed for general reference and detailed articles describe the important design factors properties and failure mechanisms of plastics The effects of composition processing and structure are detailed in articles on the physical chemical thermal and mechanical properties Other articles cover failure mechanisms such as crazing and fracture impact loading fatigue failure wear failures moisture related failure organic chemical related failure photolytic degradation and microbial degradation Characterization of plastics in failure analysis is described with additional articles on analysis of structure surface analysis and fractography Chemical Physics of Polymer Degradation And Stabilization N. Nikolai Markovich Emanuel', Anatoliï Leonidovich Buchachenko, 1987-06 **Modern Polymer Flame Retardancy** Lomakin, Gennady Zaikov, 2023-01-06 There are obvious benefits in using flame retardants as many human lives and property are saved from fire A large number of compounds have been identified as being used as flame retardants At present knowledge of long term effects resulting from exposure to flame retardants and their breakdown products is limited The aim of this volume in the book series *New Concepts in Polymer Science* is to provide a general overview of the nature mechanism of action use and environmental hazards for a number of flame retardants This monograph together with the book by the same authors *Ecological Aspects of Polymer Flame Retardancy* 1999 will be valuable to anyone interested in the field of flame retardant chemicals **The Combustion of Organic Polymers** C. F. Cullis, M. M. Hirschler, 1981 Deals comprehensively with all aspects of organic polymers An appendix gives a practical account of the flammability characteristics and flame retardance of individual organic polymers Encyclopedia of Polymer Applications, 3 Volume Set Munmaya Mishra, 2018-12-17 Undoubtedly the applications of polymers are rapidly evolving Technology is continually changing and quickly advancing as polymers are needed to solve a variety of day to day challenges leading to improvements in quality of life The *Encyclopedia of Polymer Applications* presents state of the art research and development on the applications of polymers This groundbreaking work provides important overviews to help stimulate further advancements in all areas of polymers This comprehensive multi volume reference includes articles contributed from a diverse and global team of renowned researchers It offers a broad based perspective on a multitude of topics in a variety of applications as well as detailed research

Combustion of a Polymer (PMMA) Sphere in Microgravity Jiann C. Yang,Michelle K. Donnelly,1999 The video sequences revealed a number of dynamic events including bubbling and sputtering as well as soot shell formation and break up during combustion of the spheres at reduced gravity The ejection of combusting material from the burning spheres represents a fire hazard that must be considered at reduced gravity The ejection was found to be sensitive to polymer type but independent of oxygen concentration and pressure The average value of the ejection frequency was found to be 3 Hz 5 Hz and 5 Hz for PMMA PS and PP respectively The velocities of the ejected material were estimated by tracking the material in two consecutive video frames For the PP spheres $V_a = 2.312 \text{ cm/s}$ with 60 events observed The ejected material appeared to decelerate at an average rate of 40 cm/s^2 and traverse an average distance of only 8 mm before burning to completion

The Combustion of Organic Polymeric Materials James R. Brown,Evan P. Gellert,MATERIALS RESEARCH LABS ASCOT VALE (Australia),Materials Research Laboratories, Maribyrnong, Victoria,1978 The ignition properties of a number of organic materials of interest to Navy including panelling materials adhesives unfilled polymers and flexible cellular polymers have been determined in a hot air furnace The method provides a measure of piloted and nonpiloted ignition temperatures of polymeric materials under controlled laboratory conditions Values obtained represent the lowest ambient air temperatures that cause ignition under the conditions of the test and can be of considerable value in assessing and comparing the burning behaviour of materials Author

Flame Retardants P. M. Visakh,Yoshihiko Arao,2015-02-04 This book summarizes comprehensively many recent technical research accomplishments in the area of flame retardant research It presents mainly flame retardant studies of polymer blends composites and nano composites such as rubber thermosets and thermoplastics This book discusses different types of flame retardant using in polymers especially nano composites as well as the role and chemistry Leading researchers from industry academy government and private research institutions across the globe contribute to this book Academics researchers scientists engineers and students in research and development will benefit from an application oriented book that helps them to find solutions to both fundamental and applied problems

Practical Guide to Smoke and Combustion Products from Burning Polymers Sergei Levchik,2011-03-02 This Practical Guide presents one of the most complete overviews of this important topic covering smoke generation including obscuration toxicity corrosivity small and large scale smoke assessment regulation of smoke and methods of controlling smoke by plastics formulation In particular this book focuses on the assessment of fire hazard and fire risks from combustion products and is an important book for plastics processors regulatory personnel and fire research and

safety engineers This book presents a state of the art overview of smoke formation from natural and synthetic polymeric materials Also presented is a discussion on why different commercial polymers have different intrinsic tendencies to generate smoke and ways in which smoke generation can be assessed Mechanisms and general approaches for decreasing smoke formation are examined This book also gives an overview of flammability tests for measuring smoke formation In particular the criticality of assessing smoke formation in realistic scale is discussed An overview is provided of regulations codes and standards for critical application of polymeric materials where smoke generation is controlled Common commercial approaches to decrease smoke formation in specific polymer systems and for specific applications are also presented Finally a balanced opinion on the controversial issue of smoke and associated combustion gases is given

Nanomechanics and Micromechanics Satya Bir Singh, Alexander V. Vakhrushev, A. K. Haghi, 2020-05-01 This volume enables readers to interpret and predict the effective mechanical properties of existing and emerging composites through modeling and design The book addresses that materials and structures with small scale dimensions do not behave in the same manner as their bulk counterparts Once the dimensions of the materials are reduced to the micron and sub micron range their properties are subject to significant change Thus mechanical properties will be varied and will depend on the sample size In the meantime due to the large surface to volume ration of small structures deformation mechanisms are subject to change This volume integrates various approaches in micromechanics and nanomechanics into a unified mathematical framework complete with coverage of both linear and nonlinear behaviors It weaves together the basic concepts mathematical fundamentals and formulations of micromechanics and nanomechanics into a systemic approach for understanding and modeling the effective material behavior of composite materials While providing information on recent developments in the mathematical framework of micro and nanomechanics the volume addresses highly localized phenomena and a number of interesting applications It also illustrates application of micromechanical and nanomechanical theory to design novel engineering materials

The 3rd International Microgravity Combustion Workshop ,1995 International Polymer Science and Technology ,2005 Theory of Flame Retardation of Polymeric Materials Li Jianjun, Ou Yuxiang, 2019-08-19 Flame retardant materials are of vital importance in guaranteeing personal security Especially the demand for non toxic low smoking polymerized flame retardants increases and new materials enter the market The authors present the fundamental theory of polymer combustion compare different flame retardants describe smoke suppression mechanisms and explain analyzing techniques for new materials
