**Human Memory and Amnesia (PLE: Memory)** Laird Cermak, 2014-05-09 Originally published in 1982 this book brings together two areas of research previously studied in parallel with little interaction particularly in the US normal memory processing and the amnesic syndrome When trying to document the relationship between the two it became apparent that there was much crossover and duplication of effort in a number of areas whether long term memory and short term memory truly represent independent storage systems or are simply points on a continuum trying to determine the

primary locus of variables influencing the rate at which information is lost during retention whether episodic memory and semantic memory represent two different storage systems or are simply artifacts produced by different kinds of query to a single memory system and finally whether visual and verbal memory are independent It was written following a meeting in 1979 by a small group of investigators brought together to explore this commonality and to share data and theory thus beginning the promise of a bright future of interdisciplinary interaction in memory research

**Memory Disorders in Clinical Practice** Narinder Kapur, 2017-09-29 This book has been specially designed to give practical help to those who have to deal with diagnosis and subsequent management of patients with memory disturbance resulting from specific types of cerebral pathology The author achieves this by organising his book on the basis of clinical aetiology While anatomical and psychological perspectives are introduced the emphasis is on approaches which will help clinicians in the management of patients with specific neurological diseases For example the essential topic of differential diagnosis is given prominence throughout the principles of diagnostic assessment are discussed in a separate chapter and specific diagnostic features are outlined in each of the chapters dealing with individual cerebral pathologies The author draws on his own extensive experience as a practising clinical neuropsychologist to describe and evaluate the range of existing memory test procedures and suggest additional procedures as appropriate Full references are also given for those wishing to develop their own assessment of therapeutic procedures Mainly intended for practising neurologists and clinical neuropsychologists anyone whose work brings them into contact with patients suffering from memory disturbance will find this book invaluable
