Amorphous Insulators And Semiconductors:

Amorphous Insulators and Semiconductors M.F. Thorpe, M.I. Mitkova, 1997-01-31 The aim of this NATO ASI has been to present an up to date overview of current areas of interest in amorphous materials In order to limit the material to a manageable amount the meeting was concerned exclusively with insulating and semiconducting materials The lectures and seminars fill the gap between graduate courses and research seminars The lecturers and seminar speakers were chosen as experts in their respective areas and the lectures and seminars that were given are presented in this volume During the first week of the meeting an emphasis was placed on introductory lectures mainly associated with questions relating to the glass formation and the structure of glasses The second week focused more on research seminars Each day of the meeting about four posters were presented during the coffee breaks and these formed an important focus for discussions The posters are not reproduced in this volume as the editors wanted to have only larger contributions to make this volume more coherent This volume is organized into four sections starting with general considerations of the glass forming ability and techniques for the preparation of different kinds of glasses Properties and Applications of Amorphous Materials M.F. Thorpe, L. Tichý, 2012-12-06 The aim of this NATO ASI has been to present an up to date overview of current areas of interest in amorphous materials with particular emphasis on electronic properties and device applications In order to limit the material to a manageable amount the meeting was concerned almost exclusively with semiconducting materials This volume should be regarded as a follow on to the NATO ASI held in Sozopol Bulgaria in 1996 and published as Amorphous Insulators and Semiconductors edited by M F Thorpe and M I Mitkova Kluwer Academic Publishers NATO ASI series 3 High Technology Vol 23 The lectures and seminars fill the gap between graduate courses and research seminars The lecturers and seminar speakers were chosen as experts in their respective areas and the lectures and seminars that were given are presented in this volume During the first week of the meeting an emphasis was placed on introductory lectures while the second week focused more on research seminars There were two very good poster sessions that generated a lot of discussion but these are not reproduced in this volume as the editors wanted to have only larger contributions to make the proceedings more coherent *Polycrystalline and Spatially Non-Homogeneous Amorphous Semiconductors and Insulators* Valeri Ligatchev, 2017 This book is devoted to experimental and theoretical investigations on intimate interrelations between morphology intra gap and near band gap electron spectrum N E and macroscopic properties of polycrystalline and spatially non homogeneous amorphous semiconductors and insulators **Amorphous and Liquid Semiconductors** J. Tauc, 2012-12-06 Solid state physics after solving so successfully many fundamental problems in perfect or slightly imperfect crystals tried in recent years to attack problems associated with large disorder with the aim to understand the consequences of the lack of the long range order Semiconductors are much more changed by disorder than metals or insulators and appear to be the most suitable materials for fundamental work Considerable exploratory work on amorphous and liquid

semiconductors was done by the Leningrad School since the early fifties In recent years much research in several countries was directed to deepen the understanding of the structural electronic optical vibrational magnetic and other proper ties of these materials and to possibly approach the present level of under standing of crystalline semiconductors This effort was stimulated not only by purely scientific interest but also by the possibility of new applications from which memory devices in the general sense are perhaps the most challenging The research met with serious difficulties which are absent in crystals

Silicon Molecular Beam Epitaxy E. Kasper,2018-05-04 This subject is divided into two volumes Volume I is on homoepitaxy with the necessary systems techniques and models for growth and dopant incorporation Three chapters on homoepitaxy are followed by two chapters describing the different ways in which MBE may be applied to create insulator Si stackings which may be used for three dimensional circuits The two remaining chapters in Volume I are devoted to device applications The first three chapters of Volume II treat all aspects of heteroepitaxy with the exception of the epitaxial insulator Si structures already treated in volume I
