An Atlas of Selected Galaxies Bunshiro Takase, Keiichi Kodaira, S. OKAMURA (Ed), 1984 **An Atlas of Selected Galaxies** Sunggyu Takase, 2023-01-06

It is only several decades since galaxies were recognized as huge aggregations of matter in the universe which consist of myriads of stars and vast clouds of gas. The wide variety of shapes of galaxies is one of the wonders of the universe. Attempts to classify galaxies have continued since an early stage of study when they were still called nebulae. The first step towards classification was a grouping of the patterns, the second step a systematic arrangement of various morphological types. Classification schemes that are in present use such as Hubble's are in the second group. These classifications are usually based on pattern recognition after a visual inspection of the photographic image of the galaxy and is therefore qualitative and more or less subjective. Using surface photometry of galaxies, a technique which has advanced remarkably in recent years, photographs of galaxies taken in several colour bands can now be efficiently reduced to photometric data. Analysis of this data gives quantitative information on the luminosity and colour distribution for every element of galaxies. The Atlas of Selected Galaxies presents photographs taken with the Okayama 188 cm reflector and the Kiso 105 cm Schmidt telescope for the purpose of photometric analysis. A large number of illustrations are given to demonstrate the way in which photographs of galaxies are reduced into quantitative data. These illustrations also show some representative results obtained in the course of the editors' work on the quantitative classification of galaxies.

Part I: General Description of the Classification and Photometric Analyses includes eight sections whose authors all shared the photometric work and prepared the photographs. In Part II: The Atlas the illustrations are arranged in sections corresponding to those in Part I. Part III includes tables of data for the atlas.

Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. Astronomy and Astrophysics Abstracts is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 39 records literature published in 1985 and received before August 15, 1985. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications. On account of the introduction of an object index, the scope of index information will be considerably enlarged beginning with this volume. In connection with the subject index, an additional source to satisfy the needs of retrieval is opened up. Starting with Volume 33, all the recording, correction and data processing work was done

by means of computers The recording was done by our technical staff members Ms Helga Ballmann Ms Mona El Choura Ms Monika Kohl Ms Sylvia Matyssek Ms Karin Burkhardt Ms Susanne Schlotelburg and Mr Stefan Wagner supported our task by careful proofreading It is a pleasure to thank them all for their encouragement Heidelberg September 1985 The Editors
