

Identifying Ceramic Corrosion

Under extreme conditions it is necessary to understand the mechanisms which cause the break down of ceramics.

Here Secondary Ion Mass Spectrometry (SIMS) is used to analyze the various types of corrosion of $\text{YBa}_2\text{Cu}_3\text{O}_7$.

Corroded Surface of Sintered $\text{YBa}_2\text{Cu}_3\text{O}_7$.

Corrosion Of Ceramics:

High Temperature Corrosion of Ceramics J.R. Blachere, F.S. Pettit, 1989-12-31 Describes high temperature corrosion of ceramics In addition to pure single crystals or CVD materials typical engineering materials of various purities are also studied The environments used to produce corrosion were selected based on the likelihood of their being encountered in practice and their severity The ceramic materials developed corrosion resistance by being immune to the environment or by developing passivity

,1992 **Corrosion of Ceramics** Klaus Nickel,Materials Week,Symposium entitled Corrosion of Ceramics,2003 The Corrosion of Ceramics ,1992 High-temperature Corrosion Resistance of Ceramics and Ceramic Coatings ,1996 Ceramics and ceramic composites offer the potential to operate fossil energy systems at the higher temperatures necessary for improved energy efficiency and better environmental control However because many fossil fuel derived processes contain sulfur chlorine and carbon as well as oxygen degradation from high temperature corrosion and environmental effects arising from reactions of solids with gases and condensable products is a common life determining factor in operating systems Ceramic based products are not immune to such degradation adequate corrosion resistance must be assured to exploit the technical and economic potential of such materials This is normally accomplished by using stable sound oxides that exist in their bulk form that naturally grow as surface layers upon exposure to an oxidizing environment or that are deposited as a coating on a susceptible material It is therefore important to examine the critical issues with respect to more environmental stability of ceramics that have the potential to be corrosion resistant in particular fossil environments Key aspects include not only chemical compatibility but the influence of the environment on the mechanical behavior of the ceramic materials In addition for coatings the mechanical reliability of the ceramic is a key issue in that an otherwise corrosion resistant surface layer must remain sound and adherent in order to provide protection to the underlying substrate The purpose of this work is to support the development of advanced ceramics and ceramic composites for applications in fossil environments by examining critical issues related to high temperature corrosion resistance More specifically the overall objective of this task is to examine the chemical compatibility and reliability of potentially corrosion resistant ceramics being developed as protective overcoats and or structural materials as parts of other work elements funded by the AR TD Program
