Corrosion of Stainless Steels A. John Sedriks, 1996-04-19 A Complete Up to Date Introduction to Corrosion of Stainless Steels and Metallurgical Factors This fully updated Second Edition of Corrosion of Stainless Steels covers the tremendous advances made with stainless steels in recent decades including applications in many new areas from marine technologies and offshore oil production to power plants and the kitchen sink This book offers unique insights into the corrosion mechanisms affecting stainless steels details problem avoidance strategies and helps identify corrosion resistant capabilities for these remarkable alloys Sponsored by the Electrochemical Society

Corrosion of Stainless Steels Provides a comprehensive introduction to the selection development and production of all types of stainless steels Emphasizes how metallurgical factors affect corrosion resistance Examines the limitations of stainless steels within the context of a discussion on higher alloys Takes an interdisciplinary approach that demonstrates the combined effects of metallurgy chemistry and electrochemistry on corrosion resistance Provides baseline knowledge and testing standards for stainless steels and facilitates failure analysis for industrial purposes or litigation related to equipment failure This is a much needed text for materials scientists chemical engineers corrosion specialists graduate students and anyone who needs to be brought up to date on this subject

Corrosion Resistance of Stainless Steels C.P. Dillon, 1995-05-04 This work examines the corrosion of stainless steels and similar chromium bearing nickel containing higher alloys detailing various corrosive environments including atmospheric and fire side corrosion corrosion by water and soil and corrosion caused by particular industrial processes It presents the acceptable corrosion parameters of concentration and temperature for over 250 chemicals for which stainless alloys are the preferred materials of construction

Corrosion of Austenitic Stainless Steels H S Khatak, B Raj, 2002-10-14 This comprehensive study covers all types of corrosion of austenitic stainless steel It also covers methods for detecting corrosion and investigating corrosion related failure together with guidelines for improving corrosion protection of steels Details all types of corrosion of austenitic stainless steel Covers methods for detecting corrosion and investigating corrosion related failure Outlines guidelines for improving corrosion protection of steels

Intergranular Corrosion of Stainless Alloys R. F. Steigerwald, 1978 This publication Intergranular Corrosion of Stainless Alloys contains papers presented at the Symposium on Evaluation Criteria for Determining the Susceptibility of Stainless Steels to Intergranular Corrosion which was held in Toronto Canada 23 May 1977 The symposium was sponsored by Committee A01 on Steel Stainless Steel and Related Alloys and G01 on Corrosion of Metals American Society for Testing and Materials R F Steigerwald Climax Molybdenum Company presided as symposium chairman and editor of this publication

Introduction to Stainless Steels Jonathan Beddoes, James Gordon Parr, 1999 Designed as a basic and introductory reference this book not only addresses stainless steels in the light of their resistance to corrosion for which they are more commonly recognised but also explains the wide range of other useful properties attributable to the various and specific categories of these alloys This

book is a concise easy to read introduction to one of the most widely used industrial materials Each chapter explains an important concept related to the selection application processing and use of stainless steels This book is indexed and includes appendices 1 Identification of Stainless Steels in Service 2 Toxicity of Stainless Steel 3 Table of Equivalent Designations this is not intended to be complete but includes the more commonly used stainless steels and the most widely used designation systems First published in 1965 and updated in 1986 this third edition is a completely new text

The Susceptibility of Six Stainless Steels to Stress Corrosion at Ambient and Elevated Temperatures David N. Braski, 1964 The susceptibility of six stainless steels to stress corrosion has been determined by exposing self stressed specimens indoors and outdoors at ambient temperatures and also at 550 F 561 K The salt coated stainless steels were resistant to stress corrosion cracking at 550 F 561 K for exposures from 4000 to 10 000 hours Specimens of AM 350 DA and AM 367 stainless steel were found to be very susceptible to stress corrosion cracking with exposures less than 5000 hours in both the indoor with a salt coating and outdoor with and without a salt coating environments while the AM 350 CRT AISI 501 PH 15 7 Mo and PH 14 8 Mo displayed excellent resistance In general the stainless steels with higher austenite contents appeared to have better resistance to the corrosive effects of salt both at room temperature and at 550 F 561 K

The Corrosion of Stainless Steels in the Atmosphere M.J. Johnson, Kearns, JR., P.J. Pavik, 1987 A total of 38 types of stainless steel have been exposed for 1 to 15 years at a coastal site and 32 years in a semirural atmosphere The resistance of stainless steels to degradation in the atmosphere was directly related to alloy chromium and molybdenum contents Only American Iron and Steel Institute AISI Type 410 showed any signs of corrosion in the semirural environment Significant corrosion product tarnishing occurred on all nonmolybdenum bearing stainless grades after only one year of exposure in the marine atmosphere Stainless grades that had been sensitized by an autogenous welding operation were susceptible to preferential corrosion at weld and heat affected zone surfaces when exposed at the 250 m lot on Kure Beach NC Galvanic attack and corrosion product staining was observed for certain dissimilar metal couples between AISI Type 304 and other commercially pure metals nickel base and copper base alloys A photometric technique was used to quantitatively describe subtle changes in the appearance of three stainless steel surface finishes during exposure in a semirural atmosphere

McGuire, 2008 The rate of growth of stainless steel has outpaced that of other metals and alloys and by 2010 may surpass aluminum as the second most widely used metal after carbon steel The 2007 world production of stainless steel was approximately 30 000 000 tons and has nearly doubled in the last ten years This growth is occurring at the same time that the production of stainless steel continues to become more consolidated One result of this is a more widespread need to understand stainless steel with fewer resources to provide that information The concurrent technical evolution in stainless steel and increasing volatility of raw material prices has made it more important for the engineers and designers who use stainless steel to make sound technical judgments
