Cosmic Bullets High Energy Particles In Astrophysics:

Cosmic Bullets Roger Clay, Bruce Dawson, 1999-04-23 The first complete book on one of the oldest cosmic mysteries

Classifying the Cosmos Steven J. Dick, 2019-03-21 Since the invention of the telescope 400 years ago astronomers have rapidly discovered countless celestial objects But how does one make sense of it all Astronomer and former NASA Chief Historian Steven J Dick brings order to this menagerie by defining 82 classes of astronomical objects which he places in a beginner friendly system known as Astronomy's Three Kingdoms Rather than concentrating on technicalities this system focuses on the history of each object the nature of its discovery and our current knowledge about it The ensuing book can therefore be read on at least two levels On one level it is an illustrated guide to various types of astronomical wonders On another level it is considerably more the first comprehensive classification system to cover all celestial objects in a consistent manner Accompanying each spread are spectacular historical and modern images The result is a pedagogical tour de force whereby readers can easily master astronomy's three realms of planets stars and galaxies

Handbook of Particle Detection and Imaging Claus Grupen, Irène Buvat, 2012-01-08 The handbook centers on detection techniques in the field of particle physics medical imaging and related subjects It is structured into three parts The first one is dealing with basic ideas of particle detectors followed by applications of these devices in high energy physics and other fields In the last part the large field of medical imaging using similar detection techniques is described The different chapters of the book are written by world experts in their field Clear instructions on the detection techniques and principles in terms of relevant operation parameters for scientists and graduate students are given Detailed tables and diagrams will make this a very useful handbook for the application of these techniques in many different fields like physics medicine biology and other areas of natural science

Topics in Cosmic-ray Astrophysics Michael DuVernois, 1999 Presents recent findings on charged cosmic rays primarily nuclei from galactic and extra galactic sources Chapters on new and proposed instruments and techniques examine projects such as the SilEye and the PAMELA apparatus for the search of antimatter in cosmic rays Papers on cosmic ray models look at nonlinear phenomena in diffusive shock acceleration and propagation of cosmic rays in the galaxy Material on cosmic ray sources and ultra high energy cosmic rays examine source composition and its relation to the interstellar matter and cosmic ray mass composition at highest energies The editor is a researcher at Pennsylvania State University Annotation copyrighted by Book News Inc Portland OR

Irreversible Time Physics Igor Taganov, 2020-03-06 In modern science including theoretical physics as in the early classical mechanics the unnatural reversible time of Newton based on the medieval concept of geometric time by Nicholas Oresme is still used This original sin of natural sciences has unintended consequences and creates a set of paradoxes and methodological problems for science The book explores two new models of essentially irreversible time decelerating cosmological time and irreversible discrete time of a microcosm It discusses recent astronomical observations that reveal evidence of the cosmological deceleration of the pace of time in the

distant cosmos in the solar system and on earth The structure of the model of irreversible discrete time of a microcosm as considered in the book allows for the existence of both time and anti time In particular the model predicts new uncertainty relations and violation of the mirror symmetry of the integral internal parity of the entire population of micro particles that correspond to current studies of elementary particle physics
