Cosmic Connection An Extraterrestrial Perspective:

The Cosmic Connection Carl Sagan, 1975 *The Cosmic Connection* Carl Sagan, 1975 **Carl Sagan's Cosmic Connection** Carl Sagan, 2000-08-31 A classic book by the world's most famous scientist and science visionary back in print with a new perspective

Civilized Life in the Universe George Basalla, 2006-01-19 This book is a selective and fascinating history of scientific speculation about intelligent extraterrestrial life. From Plutarch to Stephen Hawking, some of the most prominent western scientists have had quite detailed perceptions and misperceptions about alien civilizations. Johannes Kepler, fresh from transforming astronomy with his work on the shape of planetary orbits, was quite sure alien engineers on the moon were excavating circular pits to provide shelter. Christiaan Huygens, the most prominent physical scientist between Galileo and Newton, dismissed Kepler's speculations but used the laws of probability to prove that planetarians on other worlds are much like humans and had developed a sense of the visual arts. Carl Sagan sees clearly that Huygens is a biological chauvinist but doesn't see as clearly that he, Sagan, may be a cultural technological chauvinist when he assumes aliens have highly developed technology like ours but better. Basalla traces the influence of one speculation on the next, showing an unbroken but twisting chain of ideas passed from one scientist to the next and from science to popular culture. He even traces the influence of popular culture on science. Sagan always admitted how much E. R. Burroughs' Martian novels influenced his speculations about Mars. Throughout, Basalla weaves his theme that scientific belief in and search for extraterrestrial civilizations is a complex impulse, part secularized religious and part anthropomorphic. He questions the common modern scientific reasoning that life converges on intelligence and intelligence converges on one science, valid everywhere. He ends the book by agreeing with Stephen Hawking, usually a safe bet that intelligence is overrated for survival in the universe and that we are most likely alone.

Space, Time, and Aliens Steven J. Dick, 2020-05-11 In this comprehensive and interdisciplinary volume, former NASA Chief Historian Steven Dick reflects on the exploration of space, astrobiology, and its implications, cosmic evolution, astronomical institutions, discovering and classifying the cosmos, and the philosophy of astronomy. The unifying theme of the book is the connection between cosmos and culture, or what Carl Sagan many years ago called the cosmic connection. As both an astronomer and historian of science, Dr. Dick has been both a witness to and a participant in many of the astronomical events of the last half century. This collection of papers presents his reflections over the last forty years in a way accessible to historians, philosophers, and scientists alike. From the search for alien life to ongoing space exploration efforts, readers will find this volume full of engaging topics relevant to science, society, and our collective future on planet Earth and beyond.

The Nature of Nature Bruce Gordon, William Dembski, 2014-04-29 The intellectual and cultural battles now raging over theism and atheism, conservatism and secular progressivism, dualism and monism, realism and antirealism, and transcendent reality versus material reality extend even into the scientific disciplines. This stunning new volume captures this titanic clash of worldviews among those who have thought most deeply

about the nature of science and of the universe itself Unmatched in its breadth and scope The Nature of Nature brings together some of the most influential scientists scholars and public intellectuals including three Nobel laureates across a wide spectrum of disciplines and schools of thought Here they grapple with a perennial question that has been made all the more pressing by recent advances in the natural sciences Is the fundamental explanatory principle of the universe life and self conscious awareness to be found in inanimate matter or immaterial mind The answers found in this book have profound implications for what it means to do science what it means to be human and what the future holds for all of us Oracles of Science Karl Giberson, Mariano Artigas, 2009-02-27 Oracles of Science examines the popular writings of the six scientists who have been the most influential in shaping our perception of science how it works and how it relates to other fields of human endeavor especially religion Biologists Stephen Jay Gould Richard Dawkins and Edward O Wilson and physicists Carl Sagan Stephen Hawking and Steven Weinberg have become public intellectuals articulating a much larger vision for science and what role it should play in the modern worldview The scientific prestige and literary eloquence of each of these great thinkers combine to transform them into what can only be called oracles of science Their controversial often personal sometimes idiosyncratic opinions become widely known and perceived by many to be authoritative Curiously the leading oracles of science are predominantly secular in ways that don't reflect the distribution of religious beliefs within the scientific community Many of them are even hostile to religion creating a false impression that science as a whole is incompatible with religion Karl Giberson and Mariano Artigas offer an informed analysis of the views of these six scientists carefully distinguishing science from philosophy and religion in the writings of the oracles This book will be welcomed by many who are disturbed by the tone of the public discourse on the relationship between science and religion and will challenge others to reexamine their own preconceptions about this crucial topic *Gaither's Dictionary of Scientific Quotations* Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics **The Story of Human Communication** Wilbur Schramm, 1988 **Who's Who of Pulitzer Prize Winners** Elizabeth A. Brennan, Elizabeth C. Clarage, 1999 List Pulitzer Prize winners in thirty nine different categories arranged chronologically with biographical and career information selected works other awards and a brief commentary along with material on Pulitzer **Senior High School Library Catalog**, 1975 **Catalogs of the Scripps Institution of Oceanography Library** Scripps Institution of Oceanography.
