Children's Literature in the Classroom Matthew D. Zbaracki, 2023-12-06 Children's literature is a powerful resource that can inspire a young reader's lifetime love of reading but how can you ensure that your literacy teaching uses this rich creative world to its fullest This book gives pre-service primary teachers an in-depth guide to each major type of children's book examining the form structure and approach of each From fairy tales and non-fiction to picture books and digital texts learn what qualities underpin outstanding children's literature and how you can use this to inspire rewarding learning experiences in your classroom Key features Each chapter is full of key book recommendations to help you select excellent age appropriate texts for your learners An international focus across English language publishing covering key books from Australian US and UK authors A special focus on Australian indigenous children's literature Busting popular myths about children's literature to give you a deeper understanding of the form Evaluation criteria for every genre helping you to recognise the qualities of high quality books This is essential reading for anyone training to teach in primary schools and qualified teachers looking to improve their professional knowledge Matthew Zbaracki is State Head of Victoria in the National School of Education at ACU Melbourne

Foundation Mathematics For Non-Mathematicians Shott, Milo, 1990-01-01 This book is for students who either never obtained any formal qualifications in mathematics or whose knowledge became rusty through prolonged lack of use It explains mathematical concepts and topics which are prerequisites for a student embarking on any science or other numerically based course in further and higher education The text contains many worked examples illustrations and exercises with solutions to reinforce understanding of the material The emphasis is on a user friendly approach and simplicity of style which makes the book easy to study on its own without any editorial help

**Teach Multiplication, Division, and the Time Table All at the Same Time** Andray McCuien, 2011-02 The purpose of this book is to help students develop basic math skills that serve as the building blocks for all mathematical equations and problems solving concepts If basic math skills are learned adding new formulas and problem solving concepts simply become a matter of understanding when and what sequence to apply for each order of operation If students do not learn the basic foundation of mathematics addition subtraction multiplication division and the time table chart math will always be a subject that students experience difficulty understanding and comprehending This book is intended to be a simple guide to help third grade students learn and become proficient in their application of basic math skills Students will learn to use addition subtraction multiplication division and the time table chart simultaneously while they learn the strategy of counting up I have nothing against the usage of calculators but when students are introduced to the calculator at the third grade level they become dependent on the use of calculators for assistance with math

computations Once students learn to use the calculator it becomes unnecessary for them to master basic math skills because they continue to rely on the use of calculators for assistance with math The calculator becomes the math problem solving tool Could this be part of the reason students are not performing at levels of proficiency required on standardized test It is important for students to learn basic math skills in its entirety prior to being introduced to the calculator Once students have developed a basic foundation of math skills then and only then should the calculator be introduced as a learning tool When students learn the strategy of Counting Up they will be able to rely on what they have learned to find the solutions to math problems
