## Counting Early Bird:

**Martin Gardner in the Twenty-First Century** Michael Henle, Brian Hopkins, 2012-12-31 Martin Gardner enormously expanded the field of recreational mathematics with the Mathematical Games columns he wrote for Scientific American for over 25 years and the more than 70 books he published. He also had a long relationship with the Mathematical Association of America publishing articles in MAA journals right up to his death in 2010. This book collects the articles Gardner wrote for the MAA in the twenty first century together with other articles the MAA published from 1999 to 2012 that spring from and comment on his work.

**Long Hops** Mark Denny, 2016-09-30 In *Long Hops* physicist Mark Denny explains in a clear conversational style the science of bird migration from the intricacies of bird aerodynamics to the newly unraveled mysteries of their magnetic compasses. While providing wherever possible examples of indigenous Hawaiian species, the book surveys the migration phenomenon as a whole, showing that birds are breathtaking works of engineering with spectacular capabilities for long distance flights. Each year thousands of these hardy migrants fly 2,500 miles nonstop from Alaska to Hawaii. How do they endure such marathon journeys and how on earth do they know which direction to travel over featureless ocean? In fact, many migratory journeys in all parts of the world and performed by birds as small as warblers and as large as swans cover much longer distances. After answering the who, why, where, when questions, Denny focuses on the questions of how. How do researchers study bird migration? How do they gather data from old-fashioned bird banding, high-tech satellite tracking, and other techniques, and above all, how do the birds do it? Throughout the book, concepts such as the physics of bird flight and the role of physical geography on navigation are explained in a relatively math-free way. Denny also examines past adaptations migrating birds have made to changing environments and the challenges they face in the future as the world beneath them faces rapid climate change exacerbated by human activity.

**Bird Census Techniques** Colin J. Bibby, 2000-08-15 In this book, there are entire chapters devoted to the most widely used bird counting techniques and attempts to amalgamate other counting methodologies into major groups where possible. Examples of the use of methods are provided wherever possible, and the relative value of various approaches for answering specific questions is also addressed. A newly revised edition of the immensely successful *Bird Census Techniques*. An entirely new chapter covering the census methods recommended for tropical habitats. Provides a concise guide to various census techniques and their opportunities and pitfalls.

**Jinn from Hyperspace** Martin Gardner, 2009-09-25 Martin Gardner's status as a legend of popular mathematics and science writing was secured long ago. If you know him chiefly as a recreational mathematician, you'll find this collection of writings an eye opener. Gardner includes musings on homeopathy, false memory syndrome, G. K. Chesterton, and Lewis Carroll among curiosities in physics and maths harvested from essays, articles, and even letters to newspaper editors. Clear, closely argued, and entertaining, they are a fascinating insight into the breadth of interest and fecundity of the man now in his 90s. *New Scientist*. For over fifty years, Martin Gardner has been delighting readers with elegant, witty, and highly intelligent writing on

an amazing array of topics Best known for his works on popular science and mathematics and as an incisive skeptical commentator on the paranormal Gardner is also an accomplished writer of children s literature a novelist and a prolific essayist on religion philosophy and other issues This new collection of Gardner gems takes its name from an essay on a mathematical theme about a jinn or genie trapped in a Klein Bottle an amusing tale that also teaches the math phobic something interesting about a theoretical one sided object with no distinction between inside and outside Other topics in math and physics include speculations about universes where time runs in reverse the Banach Tarski paradox whereby a sphere after being deconstructed can be reassembled at twice its size and a vigorous defense of the objective reality of mathematical theorems independent of human culture On the literary side Gardner discusses two neglected works by G K Chesterton one of which concerns an imaginary but now very topical war between Islam and Christianity He also considers the fantasies of L Frank Baum that don t take place in Oz Clement Moore s ever popular The Night Before Christmas and the many fascinating books by Lewis Carroll that are sometimes overshadowed by his famous Alice in Wonderland A treat for longtime Gardner readers or the perfect introduction for newcomers The Jinn from Hyperspace offers a rich selection of stimulating intellectual wonders Martin Gardner the creator of Scientific American s Mathematical Games column which he wrote for more than twenty five years is the author of almost one hundred books including The Annotated Ancient Mariner Martin Gardner s Favorite Poetic Parodies From the Wandering Jew to William F Buckley Jr and Science Good Bad and Bogus For many years he was also a contributing editor to the Skeptical Inquirer

**Lake Naivasha, Kenya** David M. Harper,R. Boar,Mark Everard,P. Hickley,2003-05-31 This is the first comprehensive study of an east African lake for thirty years It represents the culmination of research expeditions which stretch back twenty years and is thus able to pick up long term changes which the individual research activities do not reveal Lake Naivasha is a tropical lake whose natural fluctuations are now dwarfed by human impacts Papers show how the irrigation for horticulture and power cooling has reduced the lake depth significantly exotic arrivals have altered the plant

community beyond recognition and its commercial value as a fishery and a tourist feature are reduced by over use Despite this the lake has considerable conservation value at present It provides a different case study in the ever growing library of the effects of human follies Lake Naivasha has achieved global importance in the past ten years because its waters are used to sustain the largest horticultural industry in Africa The book highlights its fragility under such pressure and points out the way towards sustainable use of the water and the ecosystem
