

DISCONTINUOUS CONSTITUENCY IN SEGMENT GRAMMAR

Abstract

Segment Grammar (SG) is a grammar formalism which is especially suited to model the incremental generation of sentences. SG is characterized by a dual level of syntactic description: *f*-structures, which are unordered functional structures composed out of syntactic segments, and *c*-structures, which represent left-to-right order of constituents. True discontinuities in SG are viewed as differences between immediate dominance (ID) relations in *c*-structures and those in corresponding *f*-structures. Constructions which are treated in this way include clause union, right dislocation, and fronting. Separable parts of words such as verbs and compound prepositions are not viewed as true discontinuities but as lexical entries consisting of separate syntactic segments.

Discontinuous Constituency is a collection of papers that discusses the role of discontinuous constituency in grammar One paper proposes a program which combines the key ideas of the categorial theory of grammatical relations with a phrase structure view of syntax The program provides a direct account of English verb participle constructions of extraposed relatives and of the peculiar distribution of particles in English Another paper shows that given certain plausible assumptions about the type of grammar which children are predisposed to acquire exposure to free word order triggers the postulation of discontinuous constituents The paper also cites evidence involving the interpretation of reflexive pronouns and quantifiers in Korean grammar that make use of such discontinuous constituents One paper tackles some issues surrounding the treatment of discontinuity and multidominance in the Generalized Phrase Structure Grammar GPSG framework The task is accomplished through a phrase marker a discontinuity and multidominance as ingredients of linguistic description and a GPSG framework extension Another paper analyzes extraposition and variations in surface order among syntactic constituents in English The collection can prove valuable for linguists students and academician involved with semantics syntax and the philosophy of language

Freezing Jutta Hartmann, Marion Jäger, Andreas Kehl, Andreas Konietzko, Susanne Winkler, 2018-09-24 Displacement is a fundamental property of human language and the restrictions on displacement have been a central concern in generative grammar ever since Ross 1967 ground breaking observations of island constraints While island phenomena have been investigated in detail from various perspectives a different domain the domain of Freezing originally defined in terms of non base structures has received far less attention This volume brings together papers that address the questions of What are the different concepts of Freezing Which empirical domains can they explain Is Freezing a core syntactic restriction or does

information structure or processing play a role The collection of papers provides insights into the empirical basis of the Freezing Principle in relation to other restrictions on extraction in order to contribute to a broader understanding of the nature of restrictions on displacement in language The overall goal of the volume is a reconsideration of Freezing and other sub extraction phenomena both from a theoretical and empirical perspective by bringing together contributions from experts in the field to discuss and broaden our knowledge of the empirical range of Freezing phenomena as well as their explanation

bilexical dependencies is essential to solve ambiguities We introduce an unlexicalized transition system for discontinuous constituency parsing and a scoring model based on constituent boundaries The resulting parser is simpler than lexicalized parser and achieves better results in both discontinuous and projective constituency parsing
